AVENTOS smooth and silent lift systems

Lifting cabinet doors up and out of the way

AVENTOS lift systems are the new premium functional hardware for upper cabinets. Doors easily lift up and out of the way, allowing complete access while not interfering with work in the kitchen. When closed, AVENTOS lift system doors glide to a soft close thanks to BLUMOTION soft closing.

Contents

- 7 Program overview
- 8 AVENTOS HF – Bi-fold door
- 22 AVENTOS HS – Up and over door
- 36 AVENTOS HL –Lift up door
- 62 AVENTOS HK – Stay lift door
- 76 AVENTOS HK-S – Stay lift door

- 106 Assembly aids
- 108 Part number index

Effortless opening . . .

AVENTOS lift systems for upper cabinet doors give optimal access to the contents of the cabinet and are completely out of the way when opened. They also ensure easy access to the handle in any position, even on tall wall cabinets.

Design options

AVENTOS offers numerous design options for wooden doors, five-piece doors and aluminum frame doors.

. . . and closing

With AVENTOS, even heavy doors open with just a light pull of the handle and stay in any position, up and out of the way, until you are ready to close them.

Quiet closing

BLUMOTION soft close is integrated into every AVENTOS mechanism for an amazingly quiet close every time.

Easy installation and assembly

With AVENTOS, installation is fast and precise. With the doors removed there are no protruding parts which makes transporting cabinets safe and convenient. Lever arms and doors snap on easily with our proven CLIP technology so there is no need for tools. Three-dimensional cam adjustments enable doors to be positioned precisely and the tension adjustment makes fine tuning the opening and closing power of the doors exact.

Opening and closing lift systems in a new way

AVENTOS lift systems open with just a light touch – and then close again with the press of a button. An inspiring feature that is certain to impress, thanks to SERVO-DRIVE for AVENTOS, the new electrical support for lift systems.

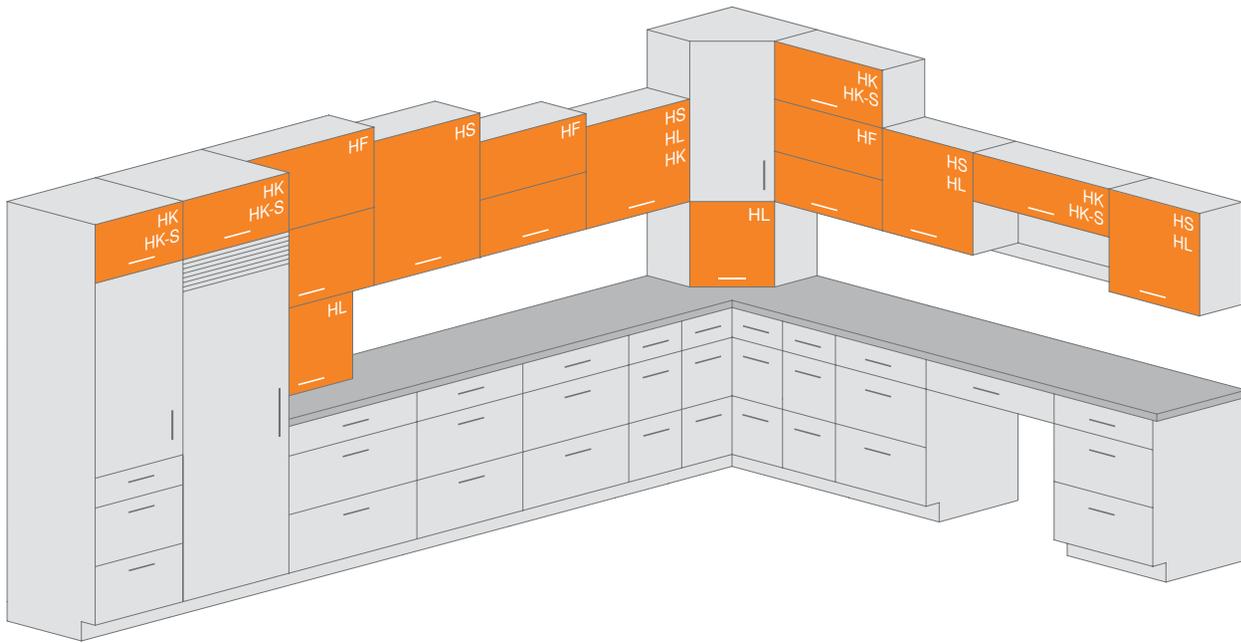

Doors that open with a simple touch

A unique solution for handle-less lift applications. TIP-ON mechanical support system makes opening doors effortless. The door opens at an angle that is comfortable while giving you a complete view and access to the cabinet interior.

A vast array of options

Solutions for all applications

There are many good reasons why AVENTOS lift systems are an excellent choice for wall cabinets. Because the cabinet doors open upwards, they provide an excellent view into the cabinet interior enabling comfortable and ergonomic access to storage items. The kitchen user retains freedom of motion, keeping the cabinet door out of the way.

The AVENTOS program opens up a whole new world of design possibilities for kitchen and office spaces. Even the widest and heaviest doors can be accommodated. Wide base cabinet designs can now be mirrored in the wall cabinets above to create a more uniform look.

AVENTOS planning tools

Blum has downloadable Excel® spreadsheets that provide the required parts and calculate the mounting locations for your application. Available at blum.com/planning

up and out of the way

Few parts –many applications

AVENTOS HF covers all common widths and heights with one small program: three lift mechanisms and four telescopic arms. This simplifies planning, ordering and warehousing.

Includes a finger safety feature

The CLIP top bottom door hinge has an innovative “release” feature that ensures finger safety.

Easy installation and adjustment

The three-dimensional adjustment feature enables doors to be precisely aligned.

The motion inside

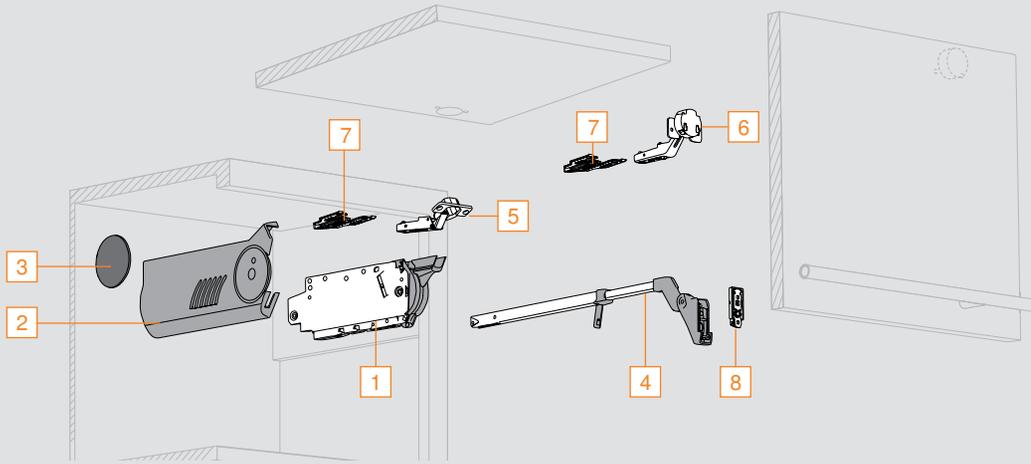

The amount of technology and components placed into each lift mechanism are what provide the unparalleled smooth operation of AVENTOS.

AVENTOS planning tools

Blum has downloadable Excel® spreadsheets that provide the required parts and calculate the mounting locations for your application. They are available at blum.com/planning.

AVENTOS HF – Face frame cabinets

Required components

Warning: Risk of injury by spring-loaded telescopic arm!

- Do not push telescopic arm down
- Remove telescopic arm from mechanism before installing cabinet

Step 1 – Determine the power factor for the application

AVENTOS planning tools available at blum.com/planning

Determine power factor

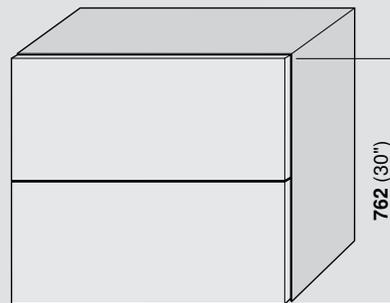

To select the correct lift mechanism for a given application, the power factor must first be calculated by using the formula below. Use the table at the bottom of the page to convert ounces into decimal form for easy calculation.

$$\text{Power factor} = \text{cabinet height (inch)} \times \text{combined door weight}^* (\text{lb})$$

* Including handle weight

Example:

Cabinet height: 30" (within possible range)
 Combined door weight = 23 lb 14 oz (14 oz = .9 lb see chart below)
 Weight converted to decimal is 23.9 lb
 Power factor = cabinet height multiplied by combined door weight*
 Power factor = 30 x 23.9
 Power factor = 717
 A power factor of 717 requires lift mechanism 20F2500.N5

combined door weight* = 23 lb 14 oz

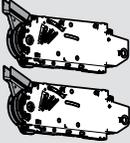

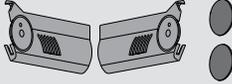

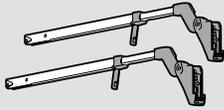

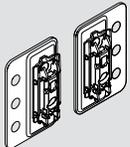

weight conversion chart

| | | | | | | | | | | | | | | | |
|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|
| oz | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 |
| lb | .1 | .1 | .2 | .3 | .3 | .4 | .4 | .5 | .6 | .6 | .7 | .8 | .8 | .9 | .9 |

Ordering parts for wood or wide aluminum doors

Step 2 – Select the required components

| Lift mechanism set | | | | | | | | | | | | | | |
|---|---|---|--------------------|------------------------------------|--|-----------------------------------|-----------------------|--|-----------------------|------------|------------------------|------------|--|------------|
|  | Set includes: 1 Lift mechanism (qty 2) ■ #7 x 35 mm (1-3/8") wood screw (qty 10) | NOTE: Trial application recommended when the required power factor is in a borderline area of lift mechanisms | | | | | | | | | | | | |
| | | <table border="1"> <thead> <tr> <th>power factor range</th> <th>Part no.</th> </tr> </thead> <tbody> <tr> <td>85 – 230 (one lift mechanism required)</td> <td>20F2200.N5</td> </tr> <tr> <td>231 – 470</td> <td>20F2200.N5</td> </tr> <tr> <td>471 – 880</td> <td>20F2500.N5</td> </tr> <tr> <td>780 – 1440</td> <td>20F2800.N5</td> </tr> <tr> <td>1401 – 2300 (three lift mechanisms required)</td> <td>20F2800.N5</td> </tr> </tbody> </table> | power factor range | Part no. | 85 – 230 (one lift mechanism required) | 20F2200.N5 | 231 – 470 | 20F2200.N5 | 471 – 880 | 20F2500.N5 | 780 – 1440 | 20F2800.N5 | 1401 – 2300 (three lift mechanisms required) | 20F2800.N5 |

SERVO-DRIVE for AVENTOS available

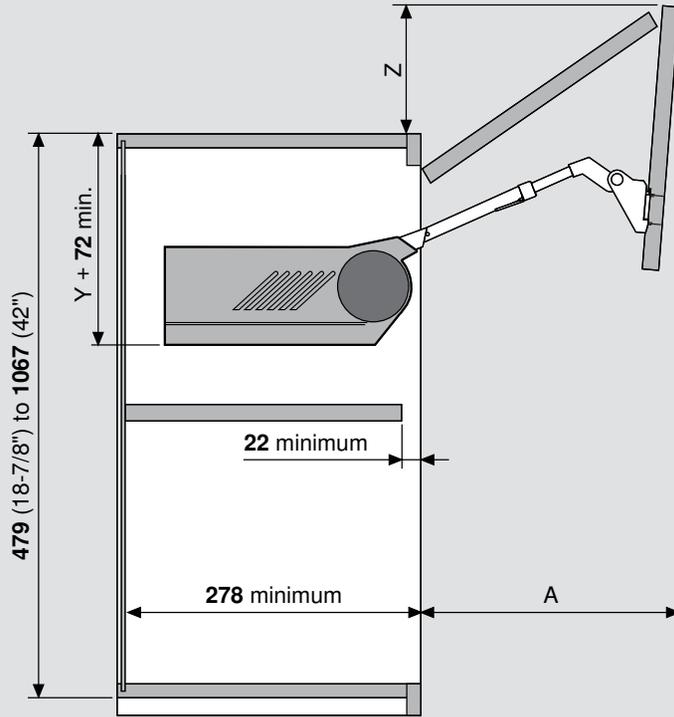

Please see SERVO-DRIVE for AVENTOS brochure for part and ordering information at blum.com

AVENTOS HF – Face frame cabinets

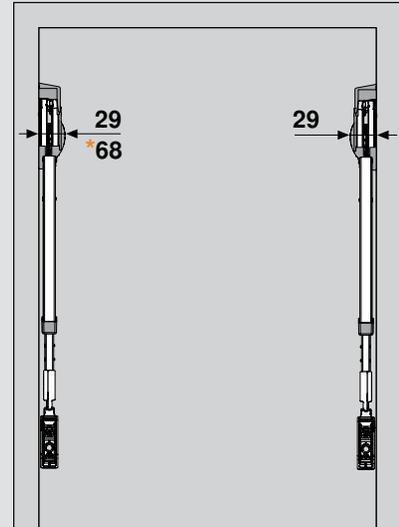

Step 1 – Check clearances

Space requirements

Door and hardware clearance

Lift mechanism clearance

*denotes clearance required for SERVO-DRIVE for AVENTOS lift mechanism

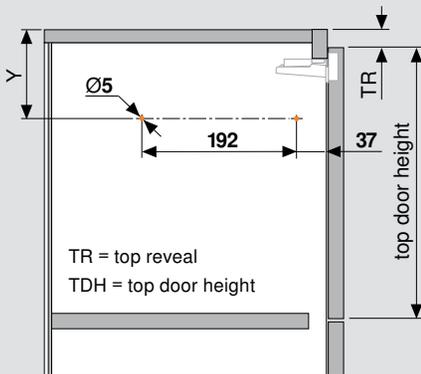

Y = See table below

Z = Top door height x .44 + 23

A = Top door height x .9 + (1.5 x bottom door thickness)

Step 2 – Mount the lift mechanisms

Bore for the locating pins

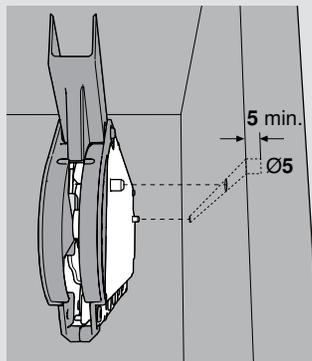

NOTE: Locating pin holes shown in orange

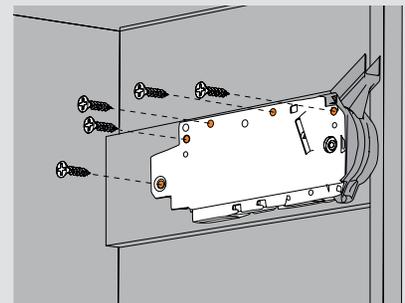

| top door height | Y |
|-----------------|------------------------|
| 231 – 271 | TDH x .6 minus 28 + TR |
| 272 – 531 | TDH x .6 minus 57 + TR |

Lift mechanism positioning and attachment

Two locating pins fit into Ø5 mm x 5 mm holes bored in the side of cabinet for proper positioning.

The included #7 x 35 mm (1-3/8") wood screws are required in the five holes marked in orange.

NOTE: Face frame cabinets must be blocked-out on the sides flush with the frame to mount the AVENTOS lift mechanisms

Cabinet preparation for wood or wide aluminum doors

Step 3 – Prepare the cabinet and doors for hinges

CLIP top hinge
Top door hinge – small overlay

* Bore at 3 then adjust 1

| overlay | | | | |
|---------|----|----|----|----|
| 13* | 14 | 15 | 16 | 17 |
| 3 | 3 | 4 | 5 | 6 |

B = bore distance

COMPACT hinge
Top door hinge – large overlay

| overlay |
|-------------|
| 32 (1-1/4") |
| 3 (1/8") |

B = bore distance

CLIP top hinge
Bottom door hinge

| reveal | | | |
|--------|---|---|---|
| 6 | 5 | 4 | 3 |
| 3 | 4 | 5 | 6 |

B = bore distance

Step 4 – Determine telescopic arm mounting plate position and attach to the bottom door

Telescopic arm mounting plate location

| top door height | X |
|-----------------|---------------------------|
| 231 – 271 | top door height x .5 + 70 |
| 272 – 531 | top door height x .5 + 47 |

NOTE: Three hinges are required for cabinet widths over 1219 (48") or 26.5 lb combined door weight

Telescopic arm mounting plate choices

Mounting plate

Slab door

ok

Five-piece door

ok

Mounting plate with bracket for large overlay five-piece doors

Five-piece door

no

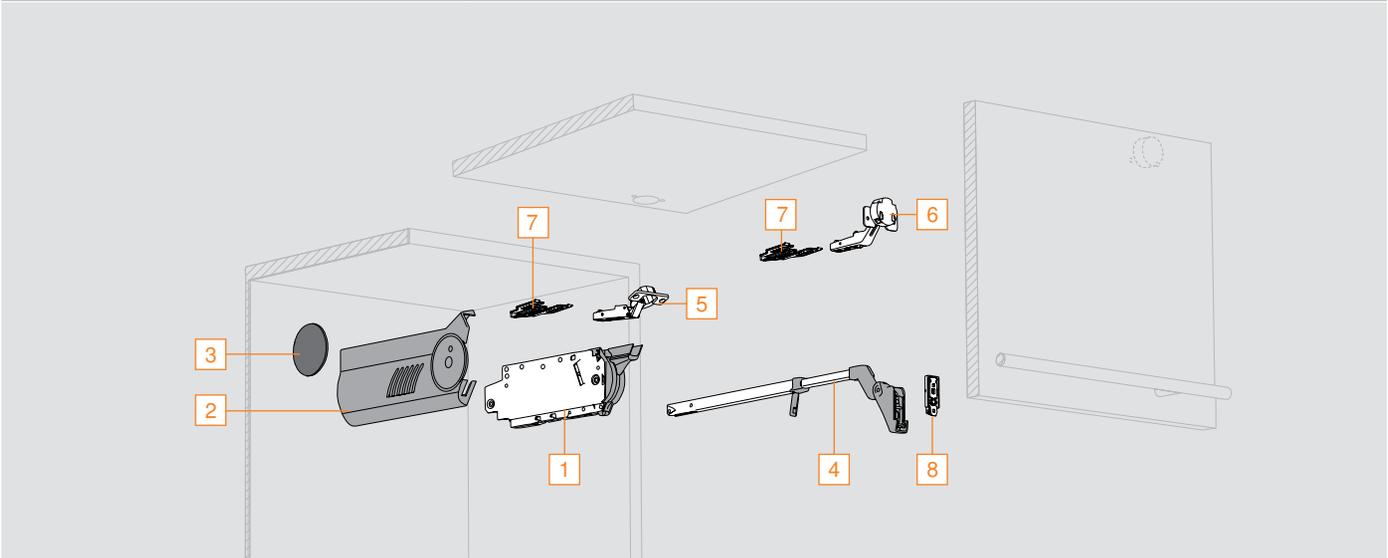

ok

Step 5 – Assemble the cabinet

Follow the assembly instructions on page 92

AVENTOS HF – Panel cabinets

Required components

Warning: Risk of injury by spring-loaded telescopic arm!

- Do not push telescopic arm down
- Remove telescopic arm from mechanism before installing cabinet

Step 1 – Determine the power factor for the application

AVENTOS planning tools available at blum.com/planning

Determine power factor

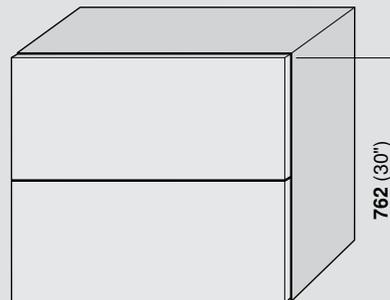

To select the correct lift mechanism for a given application, the power factor must first be calculated by using the formula below. Use the table at the bottom of the page to convert ounces into decimal form for easy calculation.

$$\text{Power factor} = \text{cabinet height (inch)} \times \text{combined door weight}^* (\text{lb})$$

* Including handle weight

Example:

Cabinet height: 30" (within possible range)
 Combined door weight = 23 lb 14 oz (14 oz = .9 lb see chart below)
 Weight converted to decimal is 23.9 lb
 Power factor = cabinet height multiplied by combined door weight*
 Power factor = 30 x 23.9
 Power factor = 717
 A power factor of 717 requires lift mechanism 20F2500.N5

combined door weight* = 23 lb 14 oz

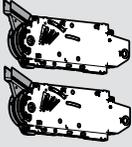

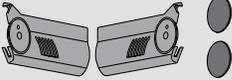

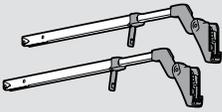

weight conversion chart

| | | | | | | | | | | | | | | | |
|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|
| oz | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 |
| lb | .1 | .1 | .2 | .3 | .3 | .4 | .4 | .5 | .6 | .6 | .7 | .8 | .8 | .9 | .9 |

Ordering parts for wood or wide aluminum doors

Step 2 – Select the required components

| Lift mechanism set | | | | | | | | | | | | | |
|---|---|--|--------------------|-------------------|---|-------------------|-------------------------------------|-------------------|-------------------------------------|-------------------|--------------------------------------|-------------------|--|
|  | Set includes: 1 Lift mechanism (qty 2) ■ #7 x 35 mm (1-3/8") wood screw (qty 10) | NOTE: Trial application recommended when the required power factor is in a borderline area of lift mechanisms | | | | | | | | | | | |
| | | <table border="1"> <thead> <tr> <th>Power factor range</th> <th>Part no.</th> </tr> </thead> <tbody> <tr> <td>85 – 230 (one lift mechanism required)</td> <td>20F2200.N5</td> </tr> <tr> <td>231 – 470</td> <td>20F2200.N5</td> </tr> <tr> <td>471 – 880</td> <td>20F2500.N5</td> </tr> <tr> <td>780 – 1440</td> <td>20F2800.N5</td> </tr> <tr> <td>1401 – 2300 (three lift mechanisms required)</td> <td>20F2800.N5</td> </tr> </tbody> </table> | Power factor range | Part no. | 85 – 230 (one lift mechanism required) | 20F2200.N5 | 231 – 470 | 20F2200.N5 | 471 – 880 | 20F2500.N5 | 780 – 1440 | 20F2800.N5 | 1401 – 2300 (three lift mechanisms required) |

B = bore distance

CLIP top hinge
Bottom door hinge

| reveal | | | |
|--------|---|---|---|
| 6 | 5 | 4 | 3 |
| 3 | 4 | 5 | 6 |

B = bore distance

Step 4 – Determine telescopic arm mounting plate position and attach to the bottom door

Telescopic arm mounting plate location

| top door height | X |
|-----------------|---------------------------|
| 231 – 271 | top door height x .5 + 70 |
| 272 – 531 | top door height x .5 + 47 |

NOTE: Three hinges are required for cabinet widths over 1219 (48") or 26.5 lb combined door weight

Telescopic arm mounting plate choices

Mounting plate

Slab door

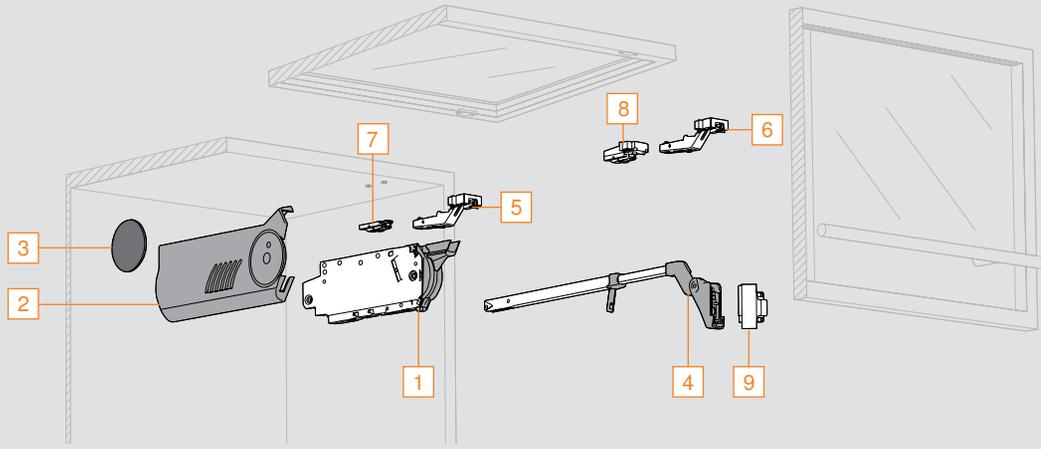

Five-piece door

Step 5 – Assemble the cabinet

Follow the assembly instructions on page 92

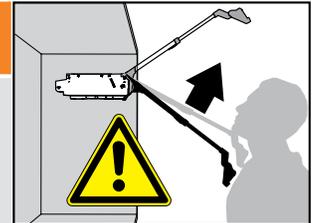

AVENTOS HF – Panel cabinets

Required components

Warning: Risk of injury by spring-loaded telescopic arm!

- Do not push telescopic arm down
- Remove telescopic arm from mechanism before installing cabinet

Step 1 – Determine the power factor for the application

AVENTOS planning tools available at blum.com/planning

Determine power factor

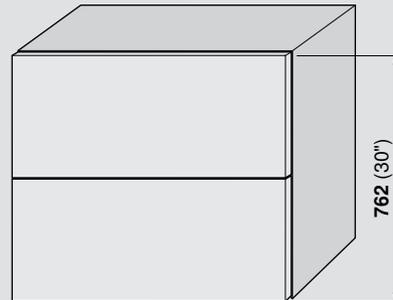

To select the correct lift mechanism for a given application, the power factor must first be calculated by using the formula below. Use the table at the bottom of the page to convert ounces into decimal form for easy calculation.

$$\text{Power factor} = \text{cabinet height (inch)} \times \text{combined door weight}^* \text{ (lb)}$$

* Including handle weight

Example:

Cabinet height: 30" (within possible range)
 Combined door weight* = 23 lb 14 oz (14 oz = .9 lb see chart below)
 Weight converted to decimal is 23.9 lb
 Power factor = cabinet height multiplied by combined door weight*
 Power factor = 30 x 23.9
 Power factor = 717
 A power factor of 717 requires lift mechanism 20F2500.N5

combined door weight* = 23 lb 14 oz

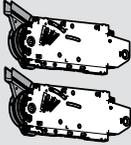

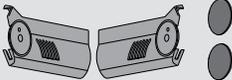

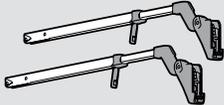

weight conversion chart

| | | | | | | | | | | | | | | | |
|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|
| oz | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 |
| lb | .1 | .1 | .2 | .3 | .3 | .4 | .4 | .5 | .6 | .6 | .7 | .8 | .8 | .9 | .9 |

Ordering parts for narrow aluminum doors

Step 2 – Select the required components

| Lift mechanism set | | | | | | | | | | | | | |
|---|--|--|--------------------|-------------------|---|-------------------|-------------------------------------|-------------------|-------------------------------------|-------------------|--------------------------------------|-------------------|--|
|  | Set includes: 1 Lift mechanism (qty 2) ■ #7 x 35 mm (1-3/8") wood screw (qty 10) | NOTE: Trial application recommended when the required power factor is in a borderline area of lift mechanisms | | | | | | | | | | | |
| | | <table border="1"> <thead> <tr> <th>Power factor range</th> <th>Part no.</th> </tr> </thead> <tbody> <tr> <td>85 – 230 (one lift mechanism required)</td> <td>20F2200.N5</td> </tr> <tr> <td>231 – 470</td> <td>20F2200.N5</td> </tr> <tr> <td>471 – 880</td> <td>20F2500.N5</td> </tr> <tr> <td>780 – 1440</td> <td>20F2800.N5</td> </tr> <tr> <td>1401 – 2300 (three lift mechanisms required)</td> <td>20F2800.N5</td> </tr> </tbody> </table> | Power factor range | Part no. | 85 – 230 (one lift mechanism required) | 20F2200.N5 | 231 – 470 | 20F2200.N5 | 471 – 880 | 20F2500.N5 | 780 – 1440 | 20F2800.N5 | 1401 – 2300 (three lift mechanisms required) |
| Power factor range | Part no. | | | | | | | | | | | | |

SERVO-DRIVE for AVENTOS available

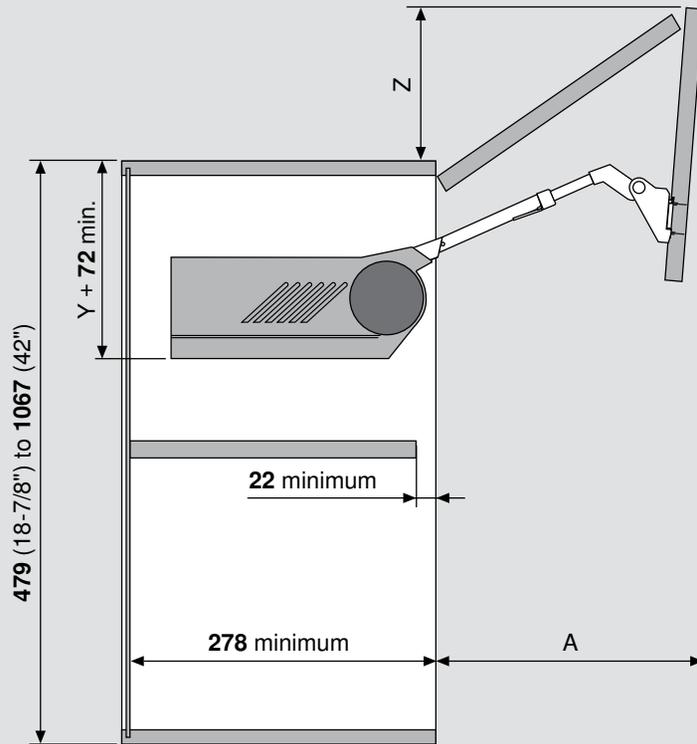

Please see SERVO-DRIVE for AVENTOS brochure for part and ordering information at blum.com

AVENTOS HF – Panel cabinets

Step 1 – Check clearances

Space requirements

Door and hardware clearance

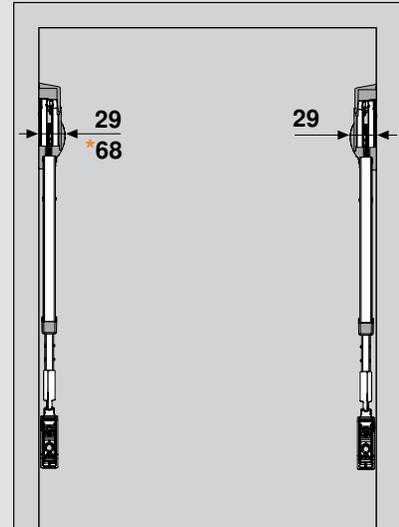

Y = See table below

Z = Top door height x .44 + 23

A = Top door height x .9 + (1.5 x bottom door thickness)

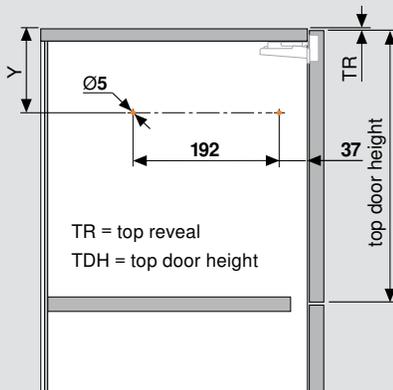

Lift mechanism clearance

*denotes clearance required for SERVO-DRIVE for AVENTOS lift mechanism

Step 2 – Mount the lift mechanisms

Bore for the locating pins

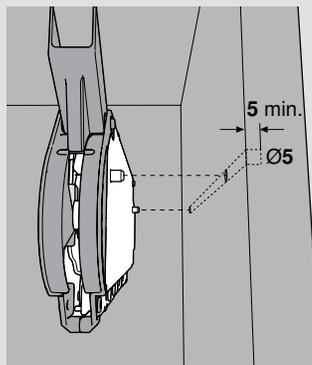

NOTE: Locating pin holes shown in orange

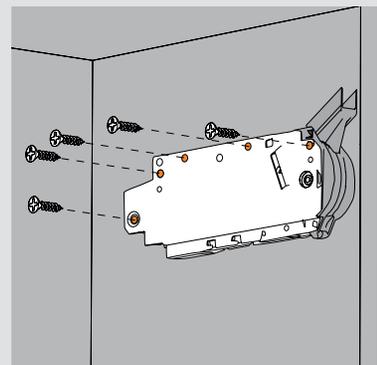

| top door height | Y |
|-----------------|------------------------|
| 231 – 271 | TDH x .6 minus 28 + TR |
| 272 – 531 | TDH x .6 minus 57 + TR |

Lift mechanism positioning and attachment

Two locating pins fit into Ø5 mm x 5 mm holes bored in the side of cabinet for proper positioning.

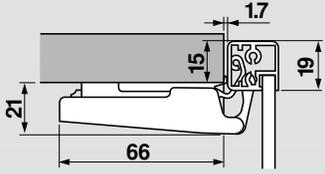

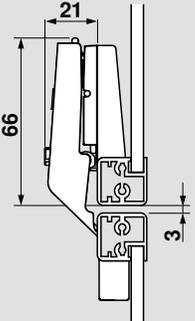

The included #7 x 35 mm (1-3/8") wood screws are required in the five holes marked in orange.

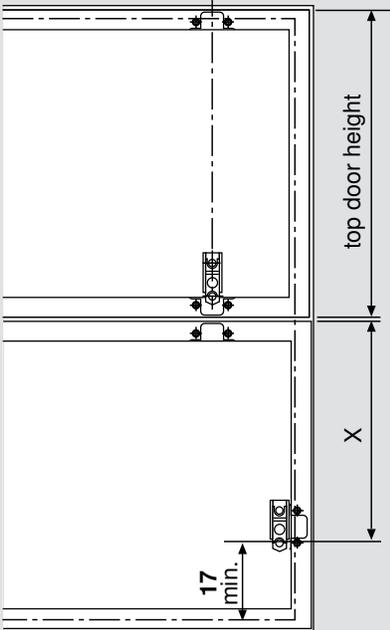

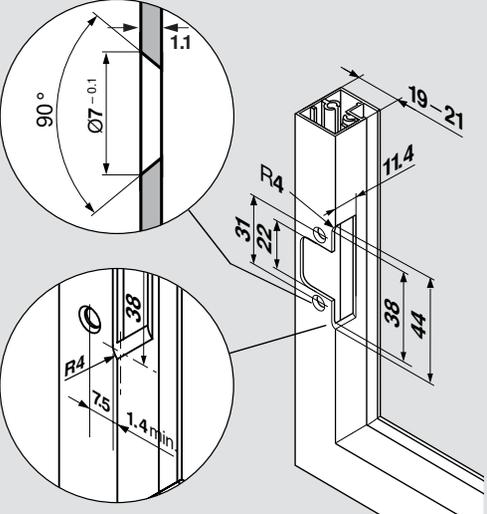

Cabinet preparation for narrow aluminum doors

Step 3 – Prepare the cabinet and doors for hinges

| CLIP top aluminum door hinge | CLIP top hinge | |
|---|--|--|
| <p>Top door hinge</p>  | <p>Bottom door hinge</p>  | |

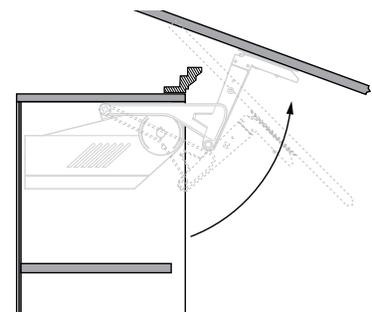

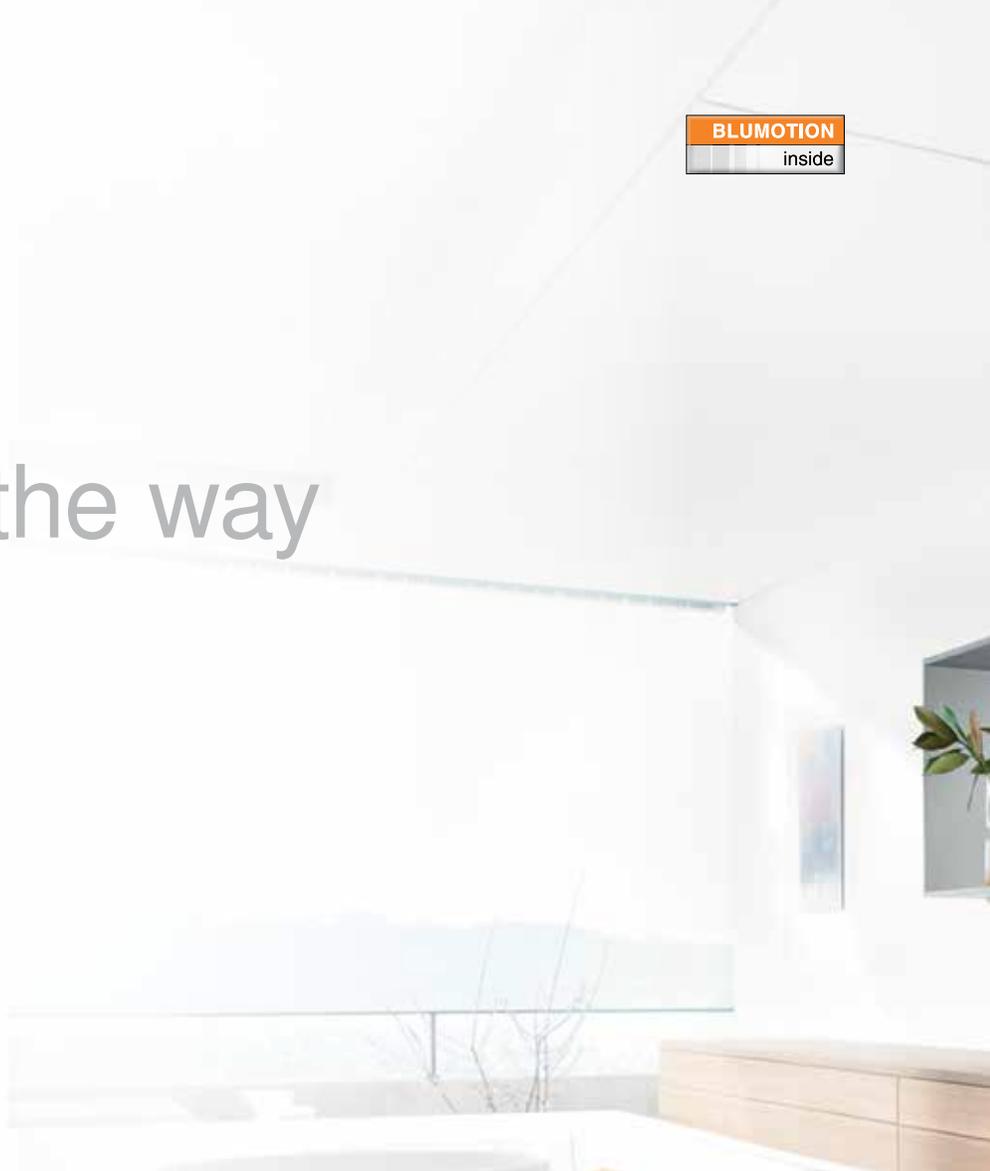

Step 4 – Determine telescopic arm mounting plate position and attach to the bottom door

| Telescopic arm mounting plate location | Hinge and mounting plate attachment | | | | | | |
|--|--|---|-----------|---------------------------|-----------|---------------------------|--|
|  |  | | | | | | |
| <table border="1"> <thead> <tr> <th>top door height</th> <th>X</th> </tr> </thead> <tbody> <tr> <td>231 – 271</td> <td>top door height x .5 + 70</td> </tr> <tr> <td>272 – 531</td> <td>top door height x .5 + 47</td> </tr> </tbody> </table> | top door height | X | 231 – 271 | top door height x .5 + 70 | 272 – 531 | top door height x .5 + 47 | |
| top door height | X | | | | | | |
| 231 – 271 | top door height x .5 + 70 | | | | | | |
| 272 – 531 | top door height x .5 + 47 | | | | | | |
| <p>NOTE: Three hinges are required for cabinet widths over 1219 (48") or 26.5 lb combined door weight</p> | | | | | | | |

Step 5 – Assemble the cabinet

Follow the assembly instructions on page 92

Up, over and out of the way

Few parts – many applications

AVENTOS HS covers all common door widths and heights with one simple program: nine lift mechanisms and only one arm assembly. This simplifies planning, ordering and warehousing.

Easy installation and adjustment

The three-dimensional adjustment feature enables doors to be precisely aligned.

Crown molding clearance

When developing the AVENTOS HS up-and-over lift mechanism, we also took into account cabinets equipped with decorative molding.

The motion inside

The amount of technology and components placed into each lift mechanism are what provide the unparalleled smooth operation of AVENTOS.

AVENTOS planning tools

Blum has downloadable Excel® spreadsheets that provide the required parts and calculate the mounting locations for your application. They are available at blum.com/planning.

AVENTOS HS – Face frame cabinets

Step 1 – Select the required lift mechanism set

AVENTOS planning tools available at blum.com/planning

Using the charts

Each chart covers three different lift mechanisms (nine total). To select the required lift mechanism set, find the cabinet height on the left side of the chart, then go across to the range that contains the weight of your door in pounds and ounces. Follow that column to the top orange box to get the part number for the lift mechanism set required for your application.

NOTE: Part numbers in **ORANGE**, pounds are **bold**

| Cabinet height | | Door weight – lb/oz | | |
|----------------|-----------|---------------------|--------------|---------------|
| inch | mm | 20S2A00.N5 | 20S2B00.N5 | 20S2C00.N5 |
| 14 | 349 – 359 | 4/6 – 10/5 | 10/6 – 20/11 | 20/12 – 23/2 |
| | 360 – 364 | 4/6 – 10/5 | 10/6 – 20/11 | 20/12 – 23/10 |
| | 365 – 374 | 4/6 – 10/5 | 10/6 – 20/3 | 20/4 – 23/3 |

| 34 | 790 – 800 | 8/12 – 14/13 | 14/14 – 25/15 | 26/0 – 44/0 |

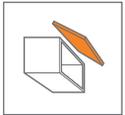

Warning: Risk of injury by arm assembly!

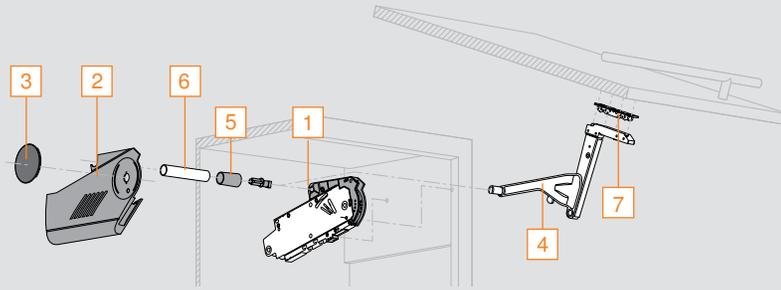

- Do not push arm assembly down
- Remove arm assembly from mechanism before installing cabinet

Ordering parts for wood or wide aluminum doors

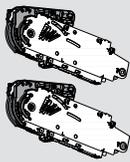

Required components

Step 2 – Select the required components

Lift mechanism set

Set includes:

- 1** Lift mechanism (qty 2)
- #7 x 35 mm (1-3/8") wood screw (qty 10)

NOTE: For correct ordering of lift mechanism set, use the charts on the previous page

| | | |
|------------|------------|------------|
| 20S2A00.N5 | 20S2B00.N5 | 20S2C00.N5 |
| 20S2D00.N5 | 20S2E00.N5 | 20S2F00.N5 |
| 20S2G00.N5 | 20S2H00.N5 | 20S2I00.N5 |

Cover set

Set includes:

- 2** Right and left cover plate
- 3** Non-handed cover cap (qty 2)

| | Part no. |
|-----------|-------------------|
| Cover set | 20S8000.NA |

Arm assembly set

Set includes:

- 4** Right and left arm assembly
- 5** Stabilizer rod cover cap (qty 2)

| | Part no. |
|------------------|-------------------|
| Arm assembly set | 20S3500.06 |

Round stabilizer rod

- 6** Round stabilizer rod

NOTE: Cabinets wider than 48" a stabilizer rod connector set is required, see page 105

| | |
|--|------------------|
| <ul style="list-style-type: none"> ■ Aluminum rod length 1061 (41-3/4"), cut to size ■ Length = interior cabinet opening minus 129 (5-1/16") | Part no. |
| Round stabilizer rod | 20Q1061UN |

Wood or wide aluminum door hardware set

Set includes:

- 7** Arm assembly mounting plate (qty 2)

| | Part no. |
|--|---------------------|
| Wood or wide aluminum hardware set | 20S4200 |
| Installation screw for wood doors | 606N or 606P |
| Installation screw for wide aluminum doors | 7072A |

Mounting plate with bracket set

Set includes:

- Mounting plate with bracket (qty 2)

| | |
|---|----------------|
| For use with large overlay five-piece doors | Part no. |
| Mounting plate with bracket set | 20S4F01 |

SERVO-DRIVE for AVENTOS available

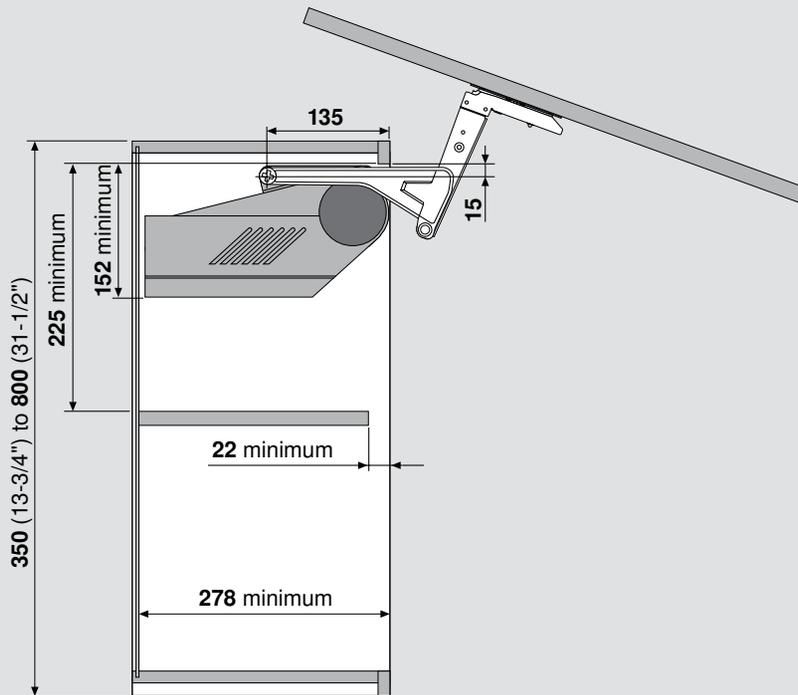

Please see SERVO-DRIVE for AVENTOS brochure for part and ordering information at blum.com

AVENTOS HS – Face frame cabinets

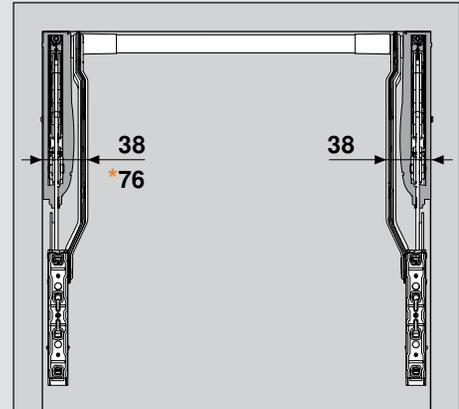

Step 1 – Check clearances

Space requirements

Door and hardware clearance

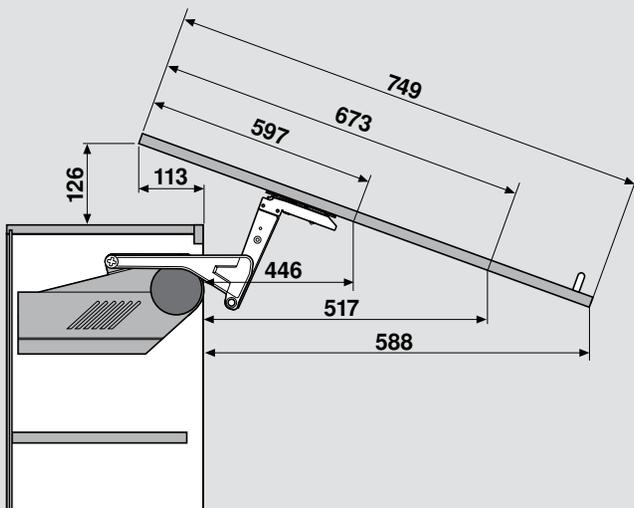

Lift mechanism clearance

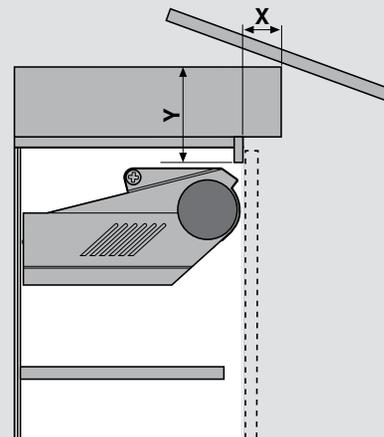

*denotes clearance required for SERVO-DRIVE for AVENTOS lift mechanism

Door protrusion for common cabinet heights

Crown molding clearance

| overlay | maximum X | maximum Y |
|-------------|---------------|----------------|
| 32 (1-1/4") | 44 (1-3/4") | 134 (5-1/4") |
| 12.5 (1/2") | 72 (2-13/16") | 126 (4-15/16") |

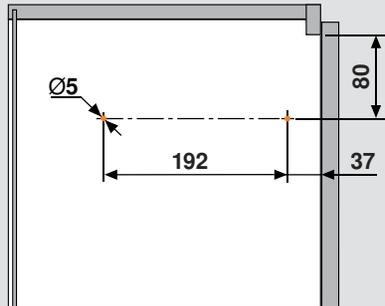

NOTE: Based on a 1-1/2" face frame width and 1-1/4" overlay

Cabinet preparation for wood or wide aluminum doors

Step 2 – Mount the lift mechanisms

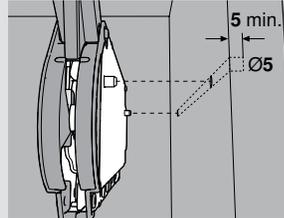

Bore for the locating pins

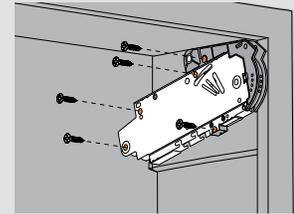

NOTE: Locating pin holes shown in orange

Lift mechanism positioning

Two locating pins fit into Ø5 mm x 5 mm holes bored in the side of cabinet for proper positioning.

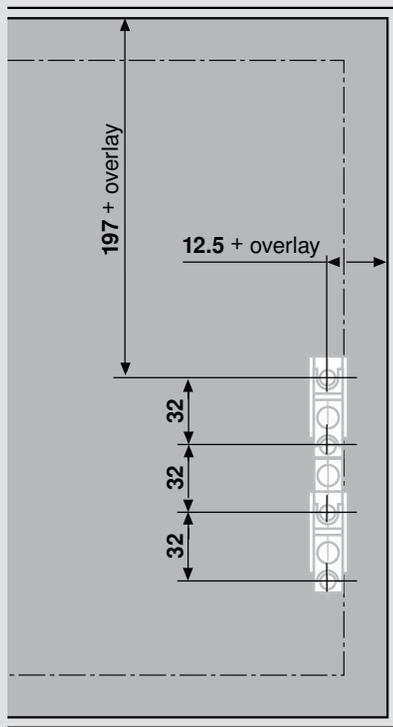

The included #7 x 35 mm (1-3/8") wood screws are required in the five holes marked in orange.

NOTE: Face frame cabinets must be blocked-out on the sides flush with the frame to mount the AVENTOS lift mechanisms

Step 3 – Determine the arm assembly mounting plate location and attach to the door

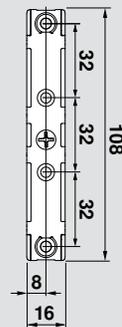

Arm assembly mounting plate location

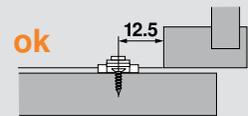

NOTE: Attach mounting plate with four 606N or 606P wood screws for wood doors or 7072A for wide aluminum doors

Arm assembly mounting plate choices

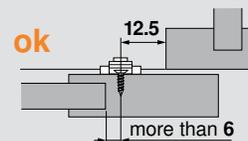

Mounting plate

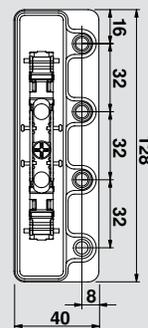

Slab door

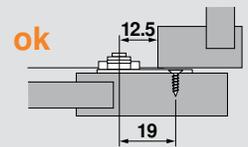

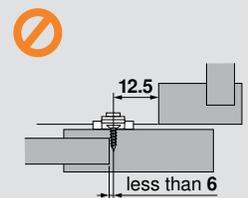

Five-piece door

Mounting plate with bracket for large overlay five-piece doors

Five-piece door

Step 4 – Assemble the cabinet

Follow the assembly instructions on page 94

AVENTOS HS – Panel cabinets

Step 1 – Select the required lift mechanism set

AVENTOS planning tools available at blum.com/planning

Using the charts

Each chart covers three different lift mechanisms (nine total). To select the required lift mechanism set, find the cabinet height on the left side of the chart, then go across to the range that contains the weight of your door in pounds and ounces. Follow that column to the top orange box to get the part number for the lift mechanism set required for your application.

NOTE: Part numbers in **ORANGE**, pounds are **bold**

| Cabinet height | | Door weight – lb/oz | | |

Warning: Risk of injury by arm assembly!

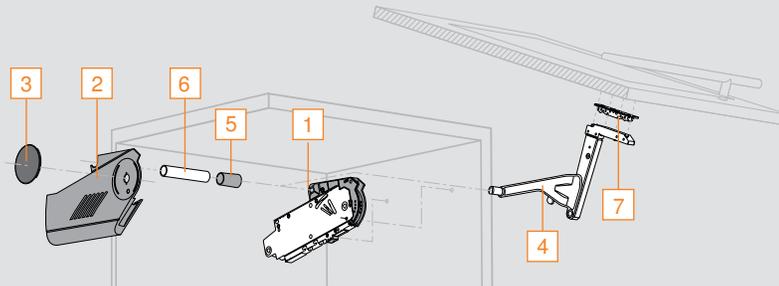

- Do not push arm assembly down
- Remove arm assembly from mechanism before installing cabinet

Ordering parts for wood or wide aluminum doors

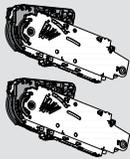

Required components

Step 2 – Select the required components

Lift mechanism set

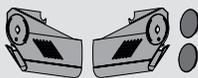

Set includes:

- 1 Lift mechanism (qty 2)
- #7 x 35 mm (1-3/8") wood screw (qty 10)

NOTE: For correct ordering of lift mechanism set, use the charts on the previous page

| | | |
|------------|------------|------------|
| 20S2A00.N5 | 20S2B00.N5 | 20S2C00.N5 |
| 20S2D00.N5 | 20S2E00.N5 | 20S2F00.N5 |
| 20S2G00.N5 | 20S2H00.N5 | 20S2I00.N5 |

Cover set

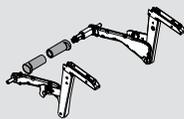

Set includes:

- 2 Right and left cover plate
- 3 Non-handed cover cap (qty 2)

| | Part no. |
|-----------|------------|
| Cover set | 20S8000.NA |

Arm assembly set

Set includes:

- 4 Right and left arm assembly
- 5 Stabilizer rod cover cap (qty 2)

| | Part no. |
|------------------|------------|
| Arm assembly set | 20S3500.06 |

Round stabilizer rod

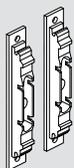

- 6 Round stabilizer rod

NOTE: Cabinets wider than 48" a stabilizer rod connector set is required, see page 105

| | |
|--|-----------|
| <ul style="list-style-type: none"> ■ Aluminum rod length 1061 (41-3/4"), cut to size ■ Length = interior cabinet opening minus 129 (5-1/16") | Part no. |
| Round stabilizer rod | 20Q1061UN |

Wood or wide aluminum door hardware set

Set includes:

- 7 Arm assembly mounting plate (qty 2)

| | Part no. |
|--|--------------|
| Wood or wide aluminum hardware set | 20S4200 |
| Installation screw for wood doors | 606N or 606P |
| Installation screw for wide aluminum doors | 7072A |

SERVO-DRIVE for AVENTOS available

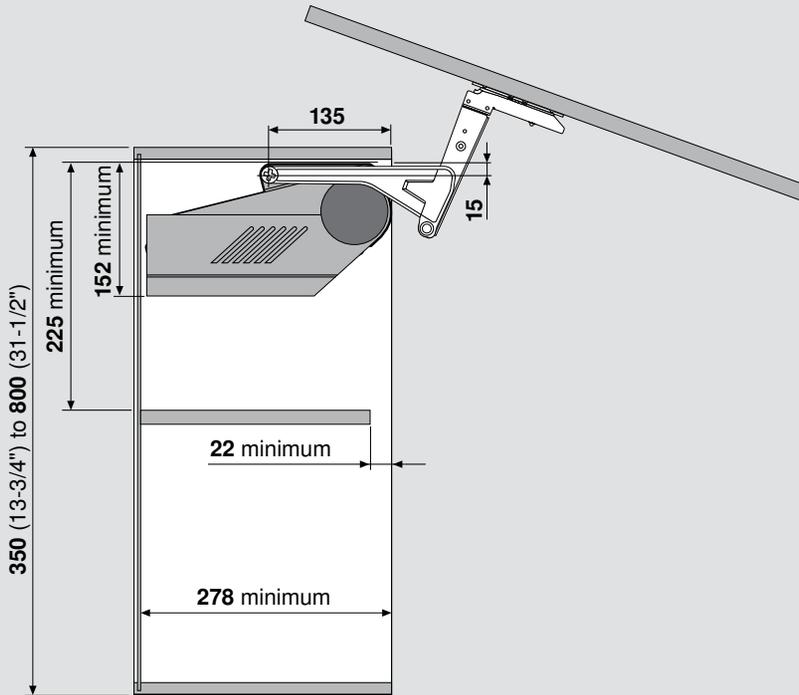

Please see SERVO-DRIVE for AVENTOS brochure for part and ordering information at blum.com

AVENTOS HS – Panel cabinets

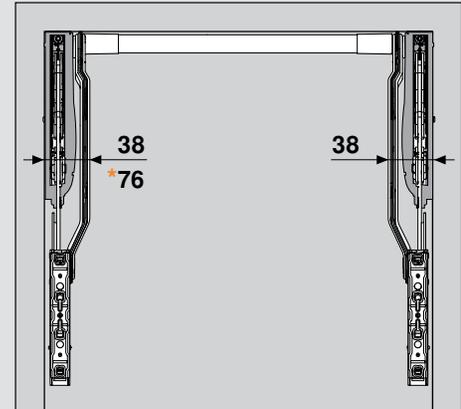

Step 1 – Check clearances

Space requirements

Door and hardware clearance

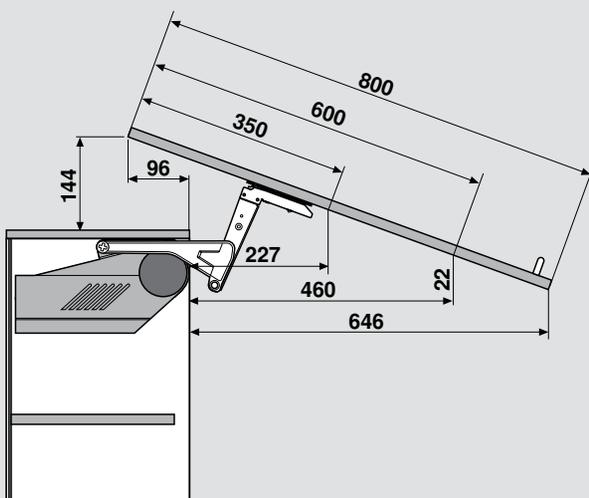

Lift mechanism clearance

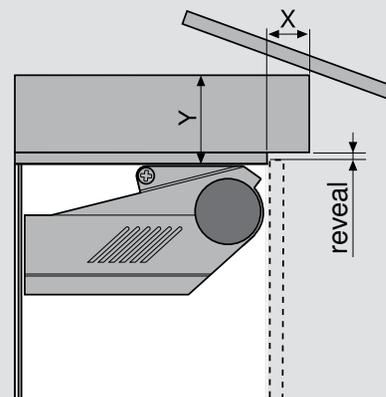

*denotes clearance required for SERVO-DRIVE for AVENTOS lift mechanism

Door protrusion for common cabinet heights

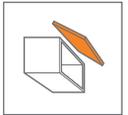

Crown molding clearance

| reveal | maximum X | maximum Y |
|-------------|-------------|-----------|
| 3 (1/8") | 35 (1-3/8") | 101 (4") |
| 2 (1/16") | 31 (1-1/4") | 101 (4") |
| 1.5 (1/16") | 28 (1-1/8") | 101 (4") |

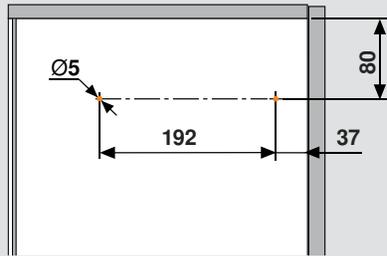

NOTE: Based on 19 mm panel thickness and panel overlay

Cabinet preparation for wood or wide aluminum doors

Step 2 – Mount the lift mechanisms

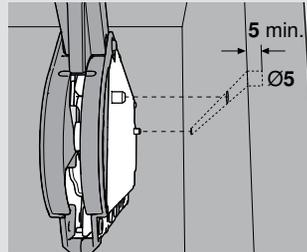

Bore for the locating pins

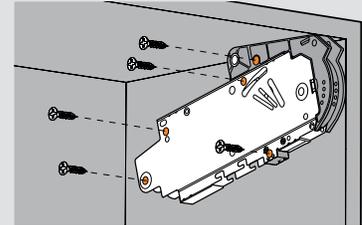

NOTE: Locating pin holes shown in orange

Lift mechanism positioning

Two locating pins fit into $\varnothing 5$ mm x 5 mm holes bored in the side of cabinet for proper positioning.

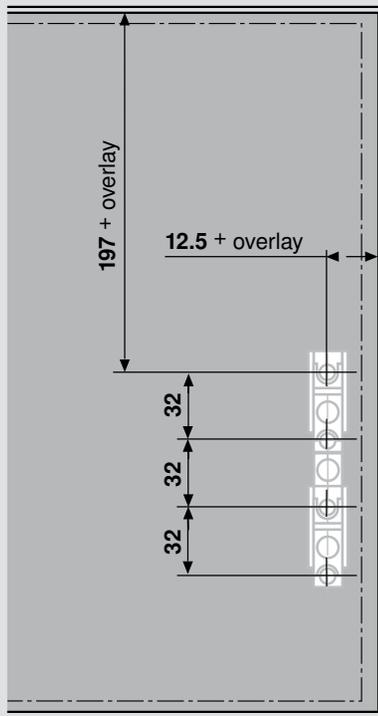

The included #7 x 35 mm (1-3/8") wood screws are required in the five holes marked in orange.

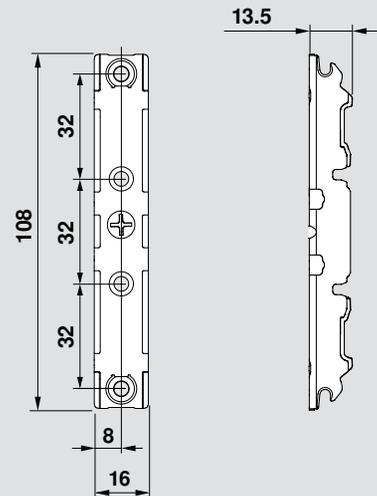

Step 3 – Determine the arm assembly mounting plate location and attach to the door

Arm assembly mounting plate location

NOTE: Attach mounting plate with four 606N or 606P wood screws for wood doors or 7072A for wide aluminum doors

Arm assembly mounting plate

Step 4 – Assemble the cabinet

Follow the assembly instructions on page 94

AVENTOS HS – Panel cabinets

Step 1 – Select the required lift mechanism set

AVENTOS planning tools available at blum.com/planning

Using the charts

Each chart covers three different lift mechanisms (nine total). To select the required lift mechanism set, find the cabinet height on the left side of the chart, then go across to the range that contains the weight of your door in pounds and ounces. Follow that column to the top orange box to get the part number for the lift mechanism set required for your application.

NOTE: Part numbers in **ORANGE**, pounds are **bold**

| Cabinet height | | Door weight – lb/oz | | |
|----------------|-----------|---------------------|--------------|-------------------------|
| inch | mm | 20S2A00.N5 | 20S2B00.N5 | 20S2C00.N5 |

Cover set

Set includes:

- 2 Right and left cover plate
- 3 Non-handed cover cap (qty 2)

| | |
|-----------|------------|
| Part no. | |
| Cover set | 20S8000.NA |

Arm assembly set

Set includes:

- 4 Right and left arm assembly
- 5 Stabilizer rod cover cap (qty 2)

| | |
|------------------|------------|
| Part no. | |
| Arm assembly set | 20S3500.06 |

Round stabilizer rod

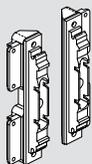

- 6 Round stabilizer rod

NOTE: Cabinets wider than 48" a stabilizer rod connector set is required, see page 105

| | |
|--|-----------|
| ■ Aluminum rod length 1061 (41-3/4"), cut to size | |
| ■ Length = interior cabinet opening minus 129 (5-1/16") | |
| Part no. | |
| Round stabilizer rod | 20Q1061UN |

Narrow aluminum door hardware set

Set includes:

- 7 Narrow aluminum arm assembly mounting plate (qty 2)
- 699.110 – Aluminum screw for narrow aluminum lever arm mounting plate (qty 8)

| | |
|------------------------------|----------|
| Part no. | |
| Narrow aluminum hardware set | 20S4200A |

SERVO-DRIVE for AVENTOS available

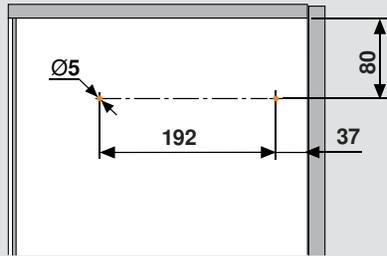

Please see SERVO-DRIVE for AVENTOS brochure for part and ordering information at blum.com

Cabinet preparation for narrow aluminum doors

Step 2 – Mount the lift mechanisms

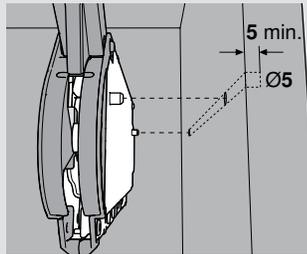

Bore for the locating pins

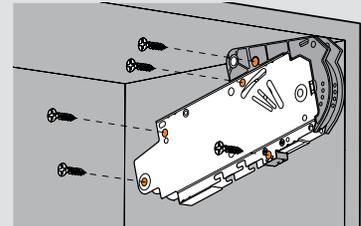

NOTE: Locating pin holes shown in orange

Lift mechanism positioning

Two locating pins fit into $\text{Ø}5 \text{ mm} \times 5 \text{ mm}$ holes bored in the side of cabinet for proper positioning.

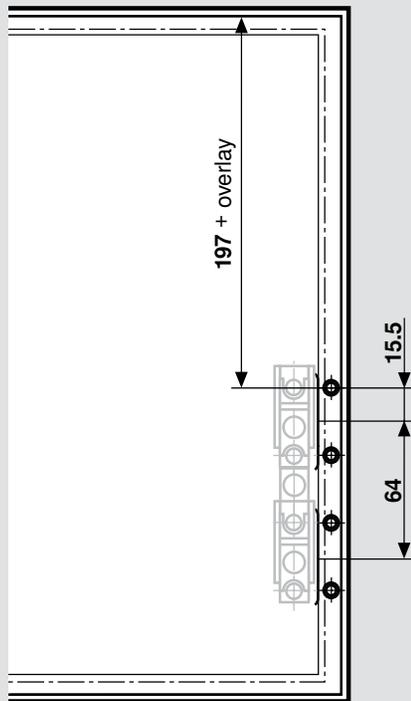

The included #7 x 35 mm (1-3/8") wood screws are required in the five holes marked in orange.

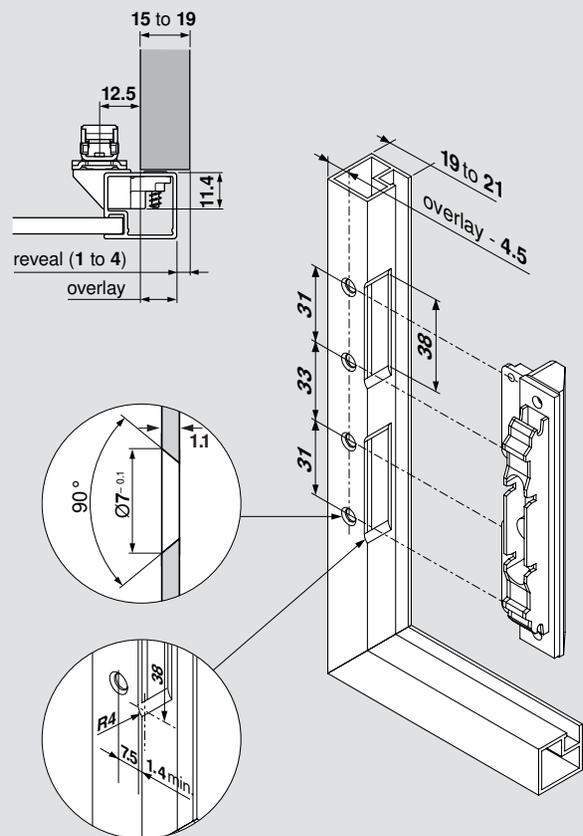

Step 3 – Determine the arm assembly mounting plate location and attach to the door

Arm assembly mounting plate location

NOTE: Attach mounting plate with four 669.110 screws provided

Arm assembly mounting plate

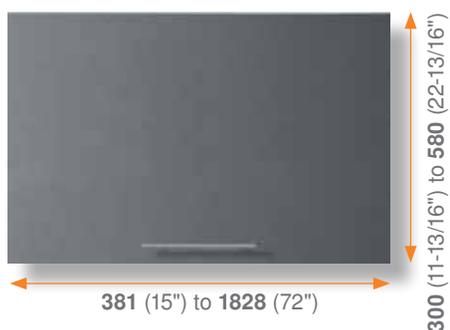

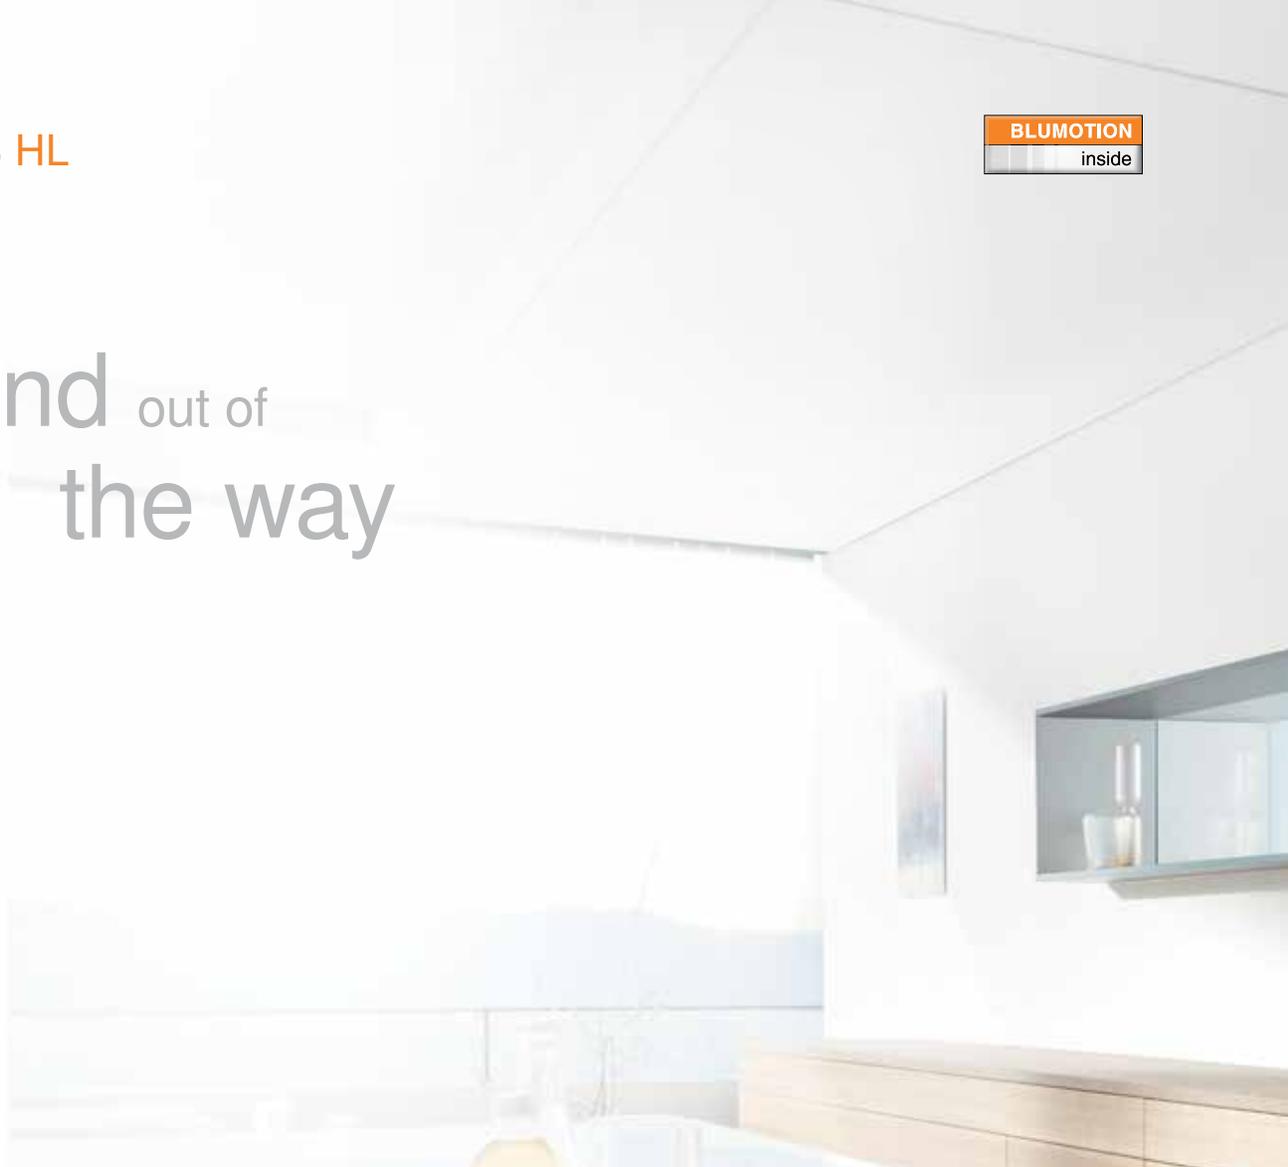

NOTE: When changing material thickness, adjust assembly dimensions accordingly

Step 4 – Assemble the cabinet

Follow the assembly instructions on page 94

up and out of the way

Few parts – many applications

AVENTOS HL covers all common widths and heights, including wide cabinets with just five different lift mechanisms and four arm assemblies. This simplifies planning, ordering and warehousing.

Numerous design options

Because the AVENTOS HL opens parallel to the cabinet, it can be used in wall cabinets, in a pantry or below another AVENTOS cabinet. On the counter top it can be used for an appliance garage.

Easy installation and adjustment

The three-dimensional adjustment feature enables doors to be precisely aligned.

The motion inside

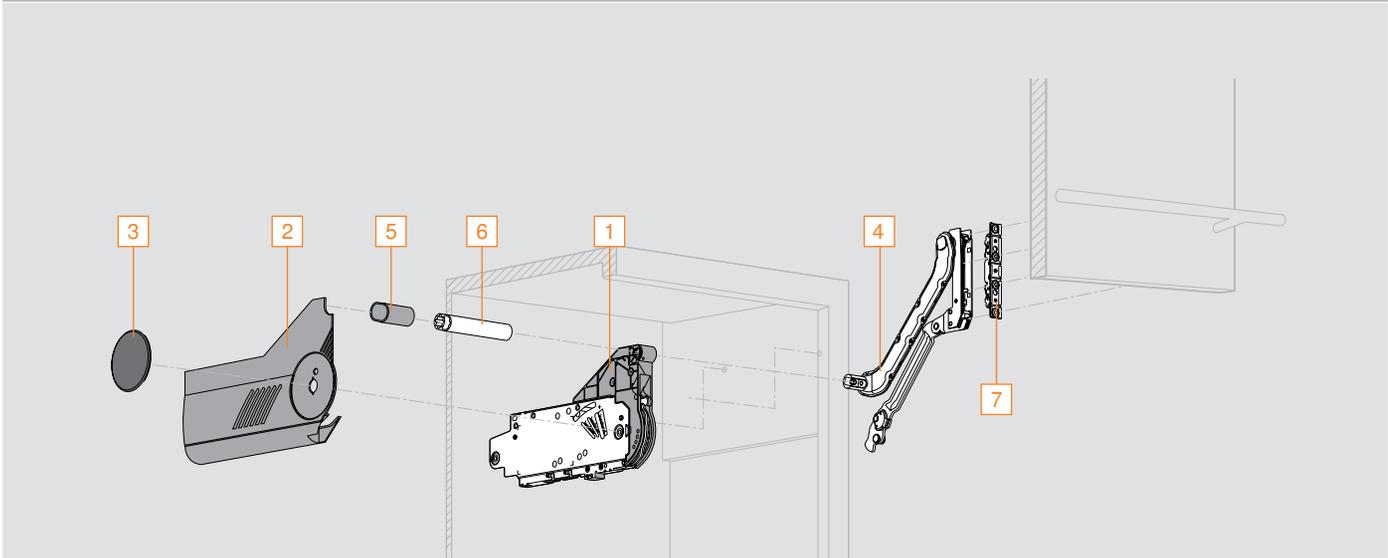

The amount of technology and components placed into each lift mechanism are what provide the unparalleled smooth operation of AVENTOS.

AVENTOS planning tools

Blum has downloadable Excel® spreadsheets that provide the required parts and calculate the mounting locations for your application. They are available at blum.com/planning.

AVENTOS HL – Face frame cabinets

Required components

Warning: Risk of injury by spring-loaded arm assembly!

- Do not push arm assembly down
- Remove arm assembly from mechanism before installing cabinet

Step 1 – Select the required lift mechanism and arm assembly

AVENTOS planning tools available at blum.com/planning

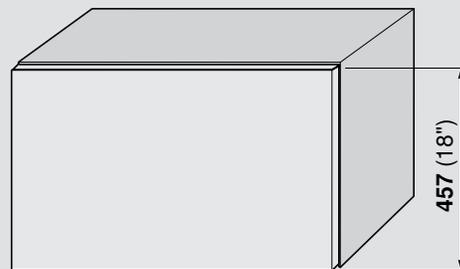

Determining the required hardware based on application

Find the required cabinet height in the first column. This will give you the required arm assembly. Continue right in that row to find the mechanism that works for the weight of your door.

Example:

Cabinet height of **457 (18")** = arm assembly 20L3800.06

Door weight of **10 lb 5 oz** = lift mechanism 20L2500.N5

door weight including handle = **10 lb 5 oz**

| cabinet height | min. opening required | arm assembly | lift mechanism (door weight - lb/oz) | | | | |
|-----------------------|-----------------------|--------------|--------------------------------------|---------------|----------------|----------------|---------------|
| | | | 20L2100.N5 | 20L2300.N5 | 20L2500.N5 | 20L2700.N5 | 20L2900.N5 |
| 11-13/16" – 13-3/4" | 10-5/16" | 20L3200.06 | 2 /12 – 8 /7 | 8 /8 – 13 /7 | 13 /8 – 25 /4 | 25 /5 – 44 /0 | – |
| 13-13/16" – 15-11/16" | 12-5/16" | 20L3500.06 | 2 /12 – 4 /10 | 4 /11 – 10 /2 | 10 /3 – 18 /10 | 18 /11 – 28 /4 | 28 /5 – 44 /0 |
| 15-3/4" – 21-5/8" | 14-1/4" | 20L3800.06 | – | 3 /13 – 6 /13 | 6 /14 – 13 /11 | 13 /12 – 24 /7 | 24 /8 – 44 /0 |
| 17-11/16" – 22-13/16" | 16-1/4" | 20L3900.06 | – | 2 /3 – 3 /4 | 3 /5 – 10 /6 | 10 /7 – 19 /3 | 19 /4 – 36 /5 |

Ordering parts for wood or wide aluminum doors

Step 2 – Select the required components

| Lift mechanism set | | |
|--------------------|--|--|
| | Set includes: 1 Lift mechanism (qty 2) ■ #7 x 35 mm (1-3/8") wood screw (qty 10) | NOTE: Trial application recommended when the required power factor is in a borderline area of lift mechanisms |

SERVO-DRIVE for AVENTOS available

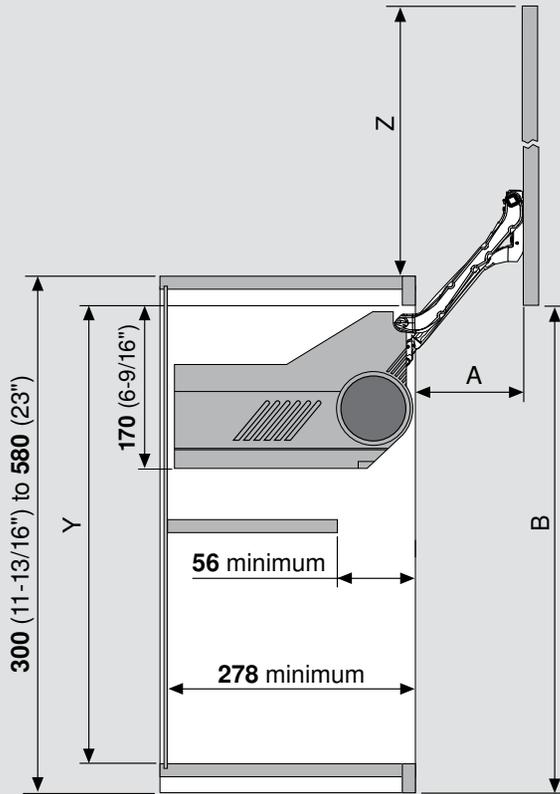

Please see SERVO-DRIVE for AVENTOS brochure for part and ordering information at blum.com

AVENTOS HL – Face frame appliance garage

Step 1 – Check clearances

Space requirements

Door and hardware clearance

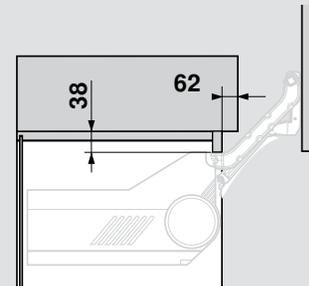

Lift mechanism clearance

*denotes clearance required for SERVO-DRIVE for AVENTOS lift mechanism

Decorative moulding clearance

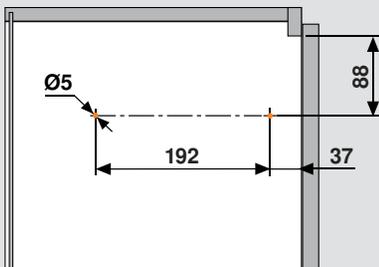

| arm assembly | cabinet height range | minimum Y | A | B | Z |
|--------------|-----------------------------------|-----------|-----|------|------|
| 20L3900.06 | 450 (17-11/16") – 580 (22-13/16") | 412 | 211 | 522* | 522* |

*based on top and bottom reveals of 0 mm – B and Z dimensions can be ± 15 mm due to range of adjustment, overpush and accuracy of installation

Step 2 – Mount the lift mechanisms

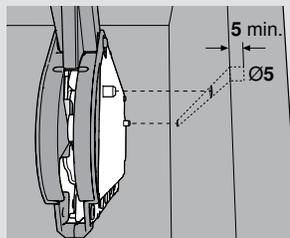

Bore for the locating pins

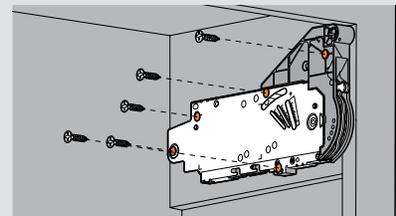

NOTE: Locating pin holes shown in orange

Lift mechanism positioning

Two locating pins fit into $\text{Ø}5$ mm x 5 mm holes bored in the side of cabinet for proper positioning.

The included #7 x 35 mm (1-3/8") wood screws are required in the five holes marked in orange.

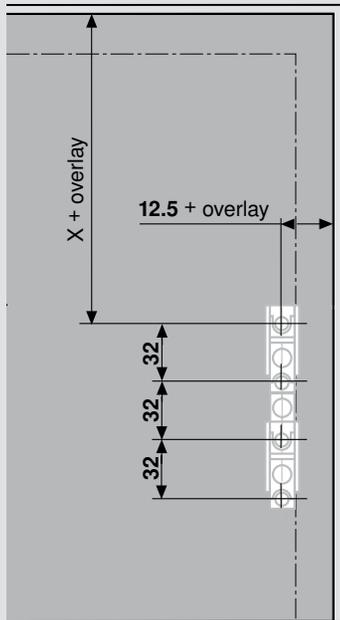

NOTE: Face frame cabinets must be blocked-out on the sides flush with the frame to mount the AVENTOS lift mechanisms

Cabinet preparation for wood or wide aluminum doors

Step 3 – Determine the arm assembly mounting plate position and attach to the door

Arm assembly mounting plate location

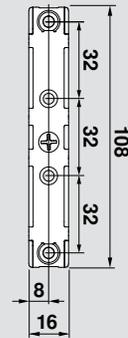

NOTE: Attach mounting plate with four 606N or 606P wood screws for wood doors or 7072A for wide aluminum doors

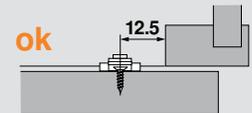

| | |
|--------------|-----|
| arm assembly | X |
| 20L3900.06 | 303 |

Arm assembly mounting plate choices

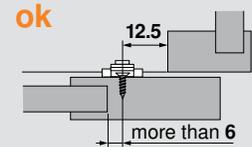

Mounting plate

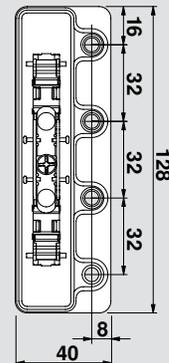

Slab door

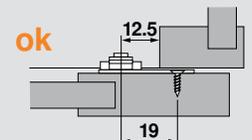

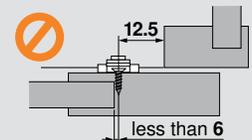

Five-piece door

Mounting plate with bracket for large overlay five-piece doors

Five-piece door

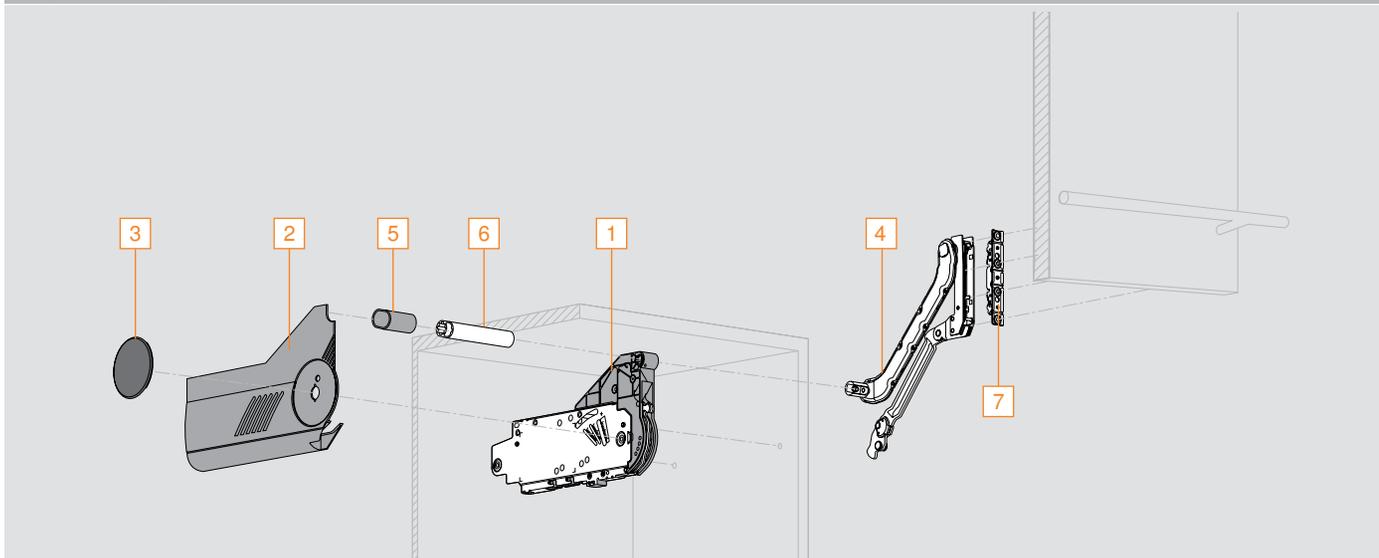

Step 4 – Assemble the cabinet

Follow the assembly instructions on page 96

For face frame corner cabinet appliance garage application see page 102

AVENTOS HL – Panel appliance garage

Required components

Warning: Risk of injury by spring-loaded arm assembly!

- Do not push arm assembly down
- Remove arm assembly from mechanism before installing cabinet

Step 1 – Select the required lift mechanism and arm assembly

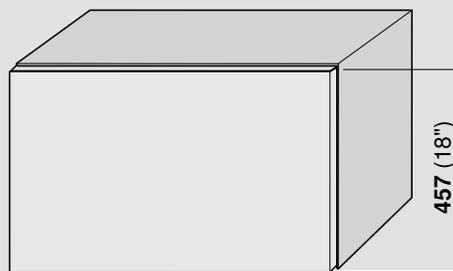

AVENTOS planning tools available at blum.com/planning

Determining the required hardware based on application

Find the required cabinet height in the first column. This will give you the required arm assembly. Continue right in that row to find the mechanism that works for the weight of your door.

Example:

Cabinet height of **457 (18")** = arm assembly 20L3900.06
 Door weight of **10 lb 5 oz** = lift mechanism 20L2500.N5

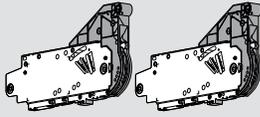

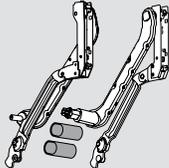

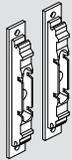

door weight including handle = **10 lb 5 oz**

| cabinet height | min. opening required | arm assembly | lift mechanism (door weight – lb/oz) | | | | |
|-----------------------|-----------------------|-------------------|--------------------------------------|------------|------------|-------------|-------------|
| | | | 20L2100.N5 | 20L2300.N5 | 20L2500.N5 | 20L2700.N5 | 20L2900.N5 |
| 17-11/16" – 22-13/16" | 16-1/4" | 20L3900.06 | – | 2/3 – 3/4 | 3/5 – 10/6 | 10/7 – 19/3 | 19/4 – 36/5 |

Ordering parts for wood or wide aluminum doors

Step 2 – Select the required components

| Lift mechanism set | | |
|---|---|--|
|  | Set includes: 1 Lift mechanism (qty 2) ■ #7 x 35 mm (1-3/8") wood screw (qty 10) | NOTE: Trial application recommended when the required power factor is in a borderline area of lift mechanisms |
| | | Part no. 20L2100.N5 20L2300.N5 20L2500.N5 20L2700.N5 20L2900.N5 |
| Cover set | | |
|  | Set includes: 2 Right and left cover plate 3 Non-handed cover cap (qty 2) | Part no. |
| | | Cover set 20L8000.N1 |
| Arm assembly set | | |
|  | Set includes: 4 Right and left arm assembly 5 Stabilizer rod cover cap (qty 2) | Part no. |
| | | Cabinet height 450 (17-11/16") – 580 (22-13/16") 20L3900.06 |
| Oval stabilizer rod | | |
|  | 6 Oval stabilizer rod NOTE: Cabinets wider than 48" a stabilizer rod connector set is required, see page 105 | ■ Aluminum rod length 1061 (41-3/4"), cut to size ■ Length = interior cabinet opening minus 129 (5-1/16") |
| | | Part no. Oval stabilizer rod 20Q1061UA |
| Wood or wide aluminum door hardware set | | |
|  | Set includes: 7 Arm assembly mounting plate (qty 2) | Part no. |
| | | Wood or wide aluminum hardware set 20S4200 |
| | | Installation screw for wood doors 606N or 606P Installation screw for wide aluminum doors 7072A |

| | |
|--------------|-----|
| arm assembly | X |
| 20L3900.06 | 303 |

Arm assembly mounting plate

NOTE: When changing frame thickness, adjust assembly dimensions accordingly

Step 4 – Assemble the cabinet

Follow the assembly instructions on page 96

A complete view of the cabinet interior

Few parts – many applications

The AVENTOS HK program has only four lift mechanisms and covers all common door widths and heights. This simplifies planning, ordering and warehousing.

NOTE: For ergonomic reasons, we recommend a maximum cabinet height of **610 (24")**.

Numerous design options

AVENTOS HK can be used in wall cabinets, in a pantry or above a refrigerator or other appliance.

Easy installation and adjustment

The three-dimensional adjustment feature enables doors to be precisely aligned.

The motion inside

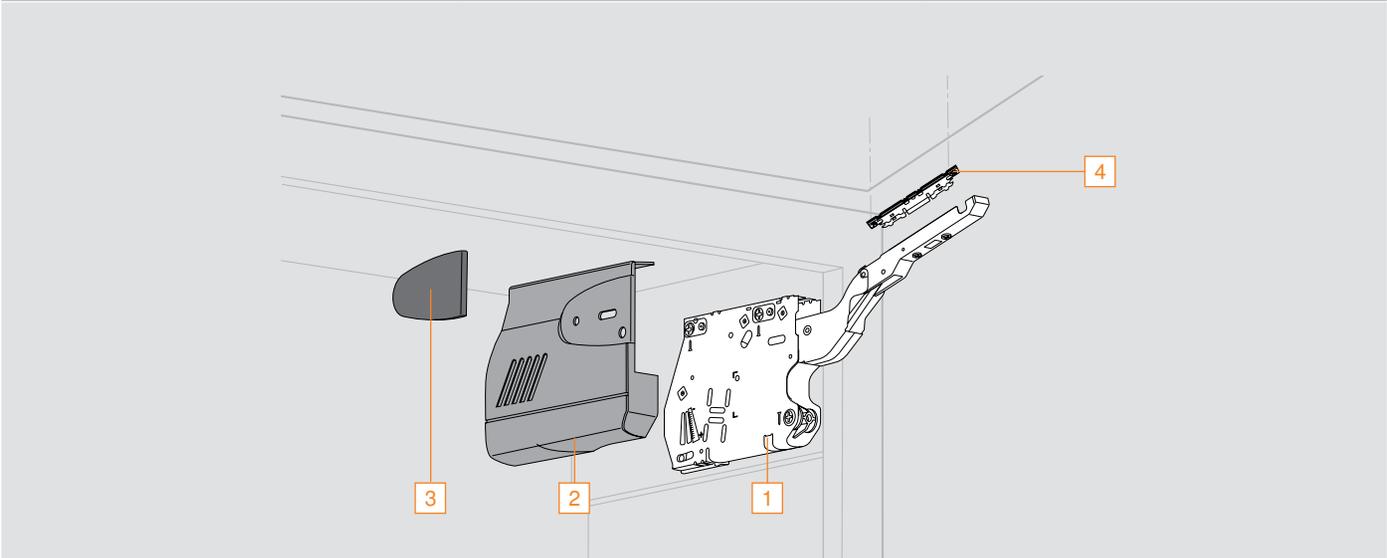

The amount of technology and components placed into each lift mechanism are what provide the unparalleled smooth operation of AVENTOS.

AVENTOS planning tools

Blum has downloadable Excel® spreadsheets that provide the required parts and calculate the mounting locations for your application. They are available at blum.com/planning

AVENTOS HK – Face frame cabinets

Required components

Warning: Risk of injury by spring-loaded lever arm!

- Do not push lever arm down
- Secure lever arm before installing cabinet

Step 1 – Determine the power factor for the application

AVENTOS planning tools available at blum.com/planning

Determine power factor

To select the correct lift mechanism for a given application, the power factor must first be calculated by using the formula below. Use the table at the bottom of the page to convert ounces into decimal form for easy calculation.

$$\text{Power factor} = \text{cabinet height (inch)} \times \text{door weight* (lb)}$$

* Including twice the handle weight

Example:

Cabinet height: 20 inches (within possible range)

Door weight including twice the handle weight: **13 lb 14 oz** (14 oz = .9 lb see chart below)

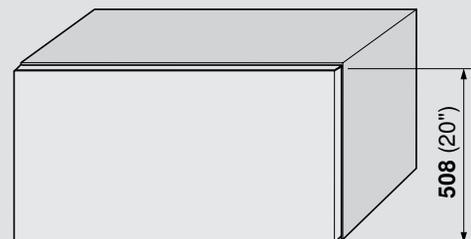

Total weight converted to decimal is **13.9 lb**

Power factor = cabinet height multiplied by door weight including twice the handle weight

Power factor = 20 x **13.9**

Power factor = 278

A power factor of 278 requires lift mechanism 20K2700.N5

door weight + twice handle weight = **13 lb 14 oz**

weight conversion chart

| | | | | | | | | | | | | | | | |
|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|
| oz | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 |
| lb | .1 | .1 | .2 | .3 | .3 | .4 | .4 | .5 | .6 | .6 | .7 | .8 | .8 | .9 | .9 |

Ordering parts for wood or wide aluminum doors

Step 2 – Select the required components

| maximum X | 70 | 59 | 49 | 35 |

Cabinet preparation for wood or wide aluminum doors

Step 2 – Mount the lift mechanisms

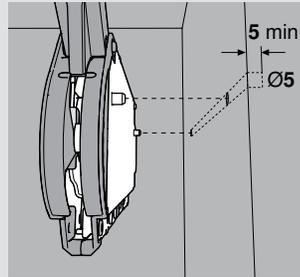

Boring for the locating pins

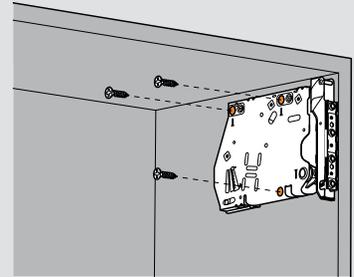

NOTE: Locating pin holes shown in orange

Lift mechanism positioning

Two locating pins fit into $\text{Ø}5 \times 5$ holes bored in the side of cabinet for proper positioning.

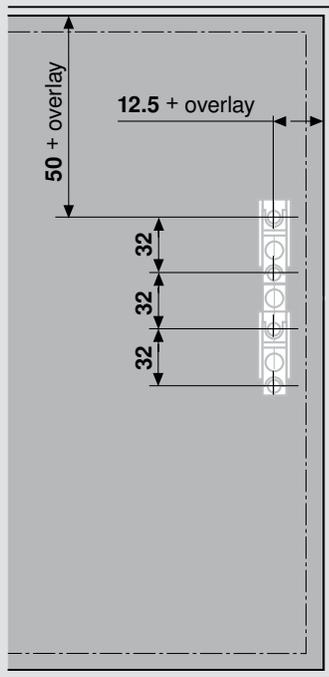

The included #7 x 35 mm (1-3/8") wood screws are required in the three holes marked in orange.

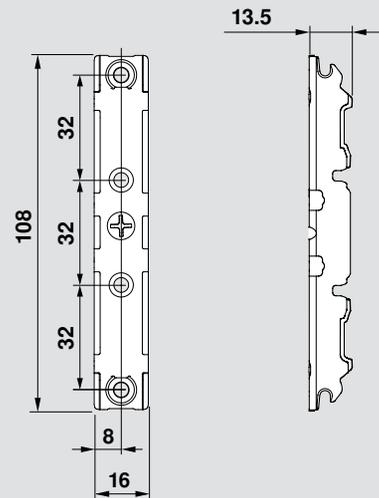

Step 3 – Determine the lever arm mounting plate position and attach to the door

Arm assembly mounting plate location

NOTE: Attach mounting plate with four 606N or 606P wood screw for wood doors or 7072A for wide aluminum doors

Arm assembly mounting plate choices

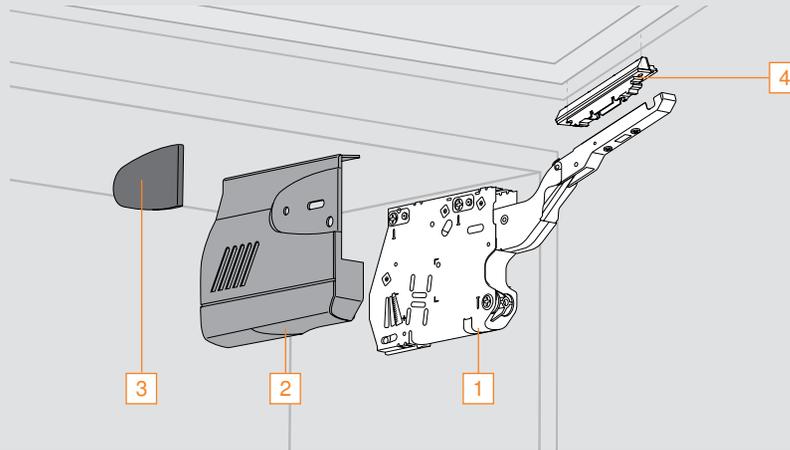

Step 4 – Assemble the cabinet

Follow the assembly instructions on page 98

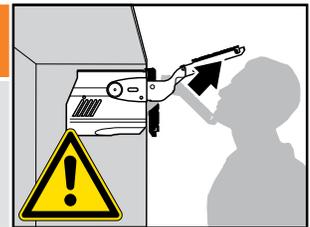

AVENTOS HK – Panel cabinets

Required components

Warning: Risk of injury by spring-loaded lever arm!

- Do not push lever arm down
- Secure lever arm before installing cabinet

Step 1 – Determine the power factor for the application

AVENTOS planning tools available at blum.com/planning

Determine power factor

To select the correct lift mechanism for a given application, the power factor must first be calculated by using the formula below. Use the table at the bottom of the page to convert ounces into decimal form for easy calculation.

$$\text{Power factor} = \text{cabinet height (inch)} \times \text{door weight* (lb)}$$

* including twice the handle weight

Example:

Cabinet height: 20 inches (within possible range)

Door weight including twice the handle weight: **13 lb 14 oz** (14 oz = .9 lb see chart below)

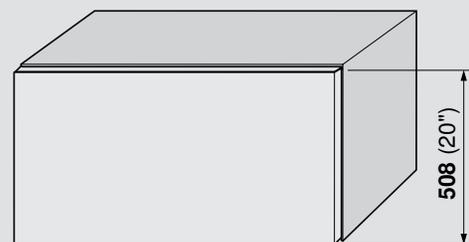

Total weight converted to decimal is **13.9 lb**

Power factor = cabinet height multiplied by door weight including twice the handle weight

Power factor = 20 x **13.9**

Power factor = 278

A power factor of 278 requires lift mechanism 20K2700.N5

door weight + twice handle weight = **13 lb 14 oz**

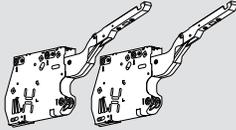

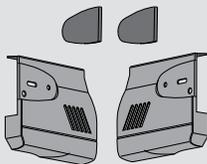

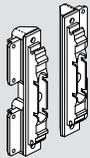

weight conversion chart

| | | | | | | | | | | | | | | | |
|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|----|
| oz | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 |
| lb | .1 | .1 | .2 | .3 | .3 | .4 | .4 | .5 | .6 | .6 | .7 | .8 | .8 | .9 | .9 |

Ordering parts for narrow aluminum doors

Step 2 – Select the required components

| Lift mechanism set | | | | | | | | | | | | | | | | | |
|---|---|---|-------------------------------|---------------|----------|---------|------|-------------------|-----------|------|-------------------|-----------|------|-------------------|-----------|------|-------------------|
|  | Set includes: 1 Lift mechanism (qty 2) ■ #7 x 35 mm (1-3/8") wood screw (qty 10) | NOTE: Trial application recommended when the required power factor is in a borderline area of lift mechanisms | | | | | | | | | | | | | | | |

AVENTOS HK – Panel cabinets

Step 1 – Check clearances

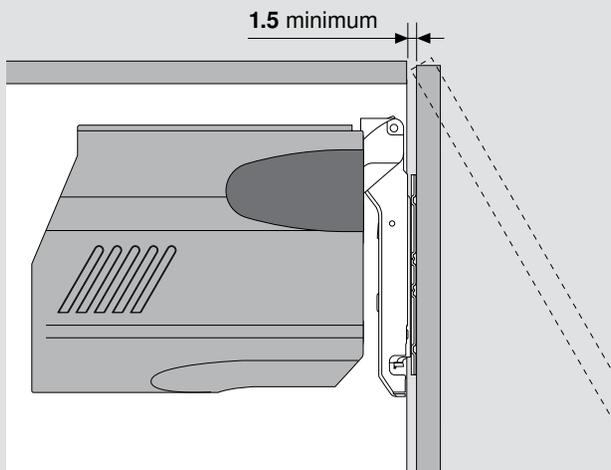

Space requirements

Door and hardware clearance

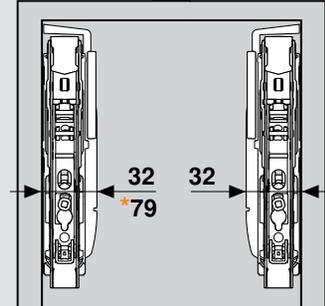

$Z = \text{door height} \times .29 \text{ minus } 23 + \text{door thickness}$

Minimum gap

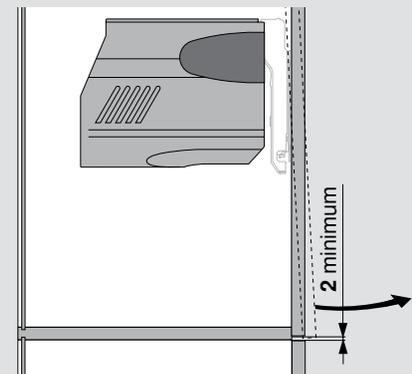

NOTE: Minimum gap assumes door radius of 1 mm

Lift mechanism clearance

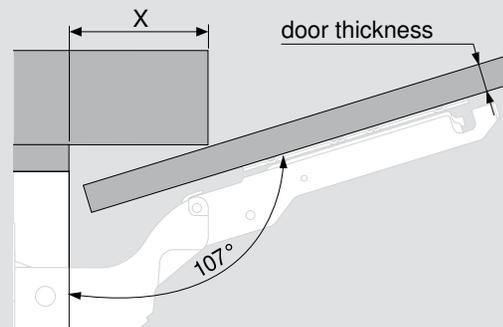

*denotes clearance required for SERVO-DRIVE for AVENTOS lift mechanism

Minimum bottom reveal

Decorative molding clearance

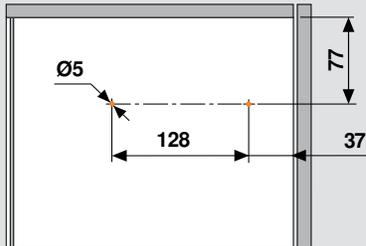

| | | | | |
|----------------|-----|----|----|----|
| door thickness | m16 | 19 | 22 | 26 |
| maximum X | 70 | 59 | 49 | 35 |

Cabinet preparation for narrow aluminum door

Step 2 – Mount the lift mechanisms

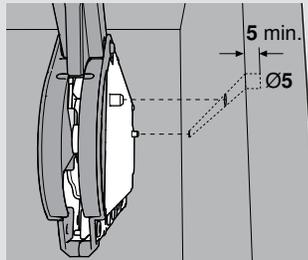

Boring for the locating pins

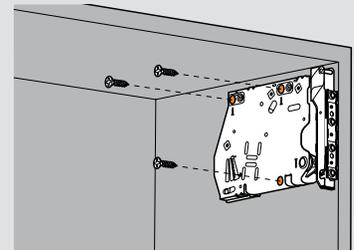

NOTE: Locating pin holes shown in orange

Lift mechanism positioning

Two locating pins fit into $\text{Ø}5 \times 5$ holes bored in the side of cabinet for proper positioning.

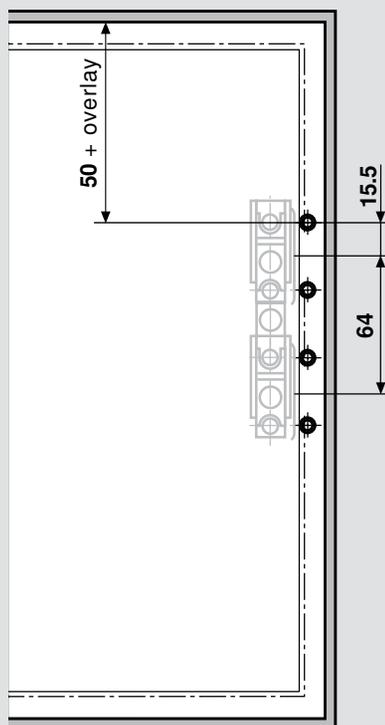

The included #7 x 35 mm (1-3/8") wood screws are required in the three holes marked in orange.

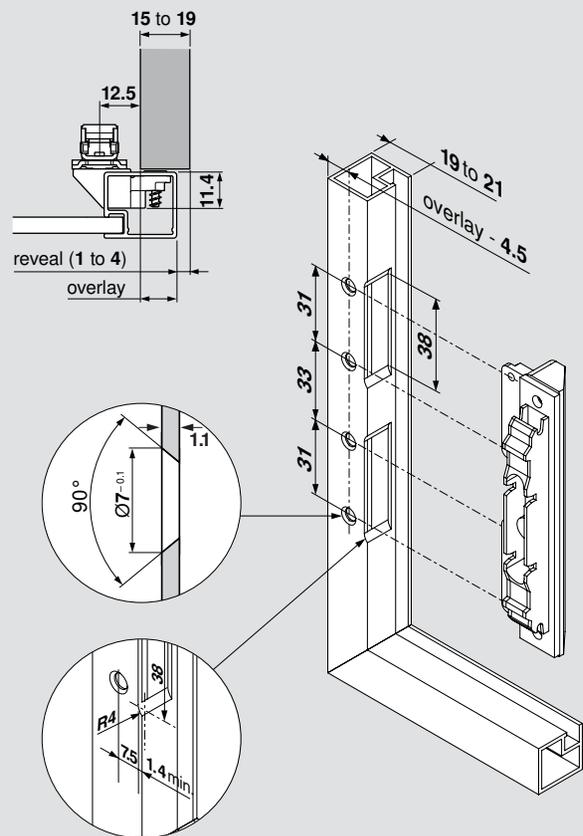

Step 3 – Determine the Lever arm mounting plate position and attach to the door

Arm assembly mounting plate location

NOTE: Attach mounting plate with four 669.110 screws provided

Arm assembly mounting plate

NOTE: When changing material thickness, adjust assembly dimensions accordingly

Step 4 – Assemble the cabinet

Follow the assembly instructions on page 98

Stay lift for the smallest of cabinets

Few parts – many applications

The AVENTOS HK-S program has only three lift mechanisms and covers smaller door heights. This simplifies planning, ordering and warehousing.

Numerous design options

AVENTOS HK-S can be used in small wall cabinets, above a refrigerator or in a pantry.

Easy installation and adjustment

The three-dimensional adjustment feature enables doors to be precisely aligned.

The motion inside

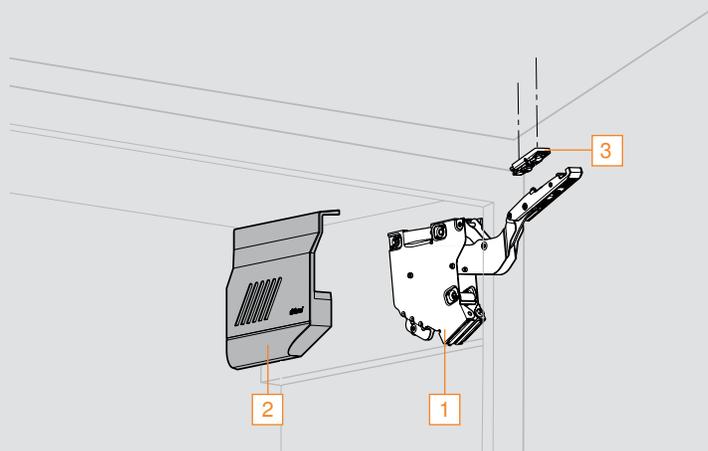

The amount of technology and components placed into each lift mechanism are what provide the unparalleled smooth operation of AVENTOS.

AVENTOS planning tools

Blum has downloadable Excel® spreadsheets that provide the required parts and calculate the mounting locations for your application. They are available at blum.com/planning.

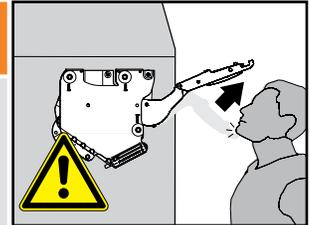

AVENTOS HK-S – Face frame cabinets

Required components

Warning: Risk of injury by spring-loaded lever arm!

- Do not push lever arm down
- Secure lever arm before installing cabinet

Step 1 – Determine the power factor for the application

AVENTOS planning tools available at blum.com/planning

Determine power factor

To select the correct lift mechanism for a given application, the power factor must first be calculated by using the formula below. Use the table at the bottom of the page to convert ounces into decimal form for easy calculation.

$$\text{Power factor} = \text{cabinet height (inch)} \times \text{door weight* (lb)}$$

* Including twice the handle weight

Example:

Cabinet height: 9 inches (within possible range)

Door weight including twice the handle weight: 5 lb 14 oz (14 oz = .9 lb see chart below)

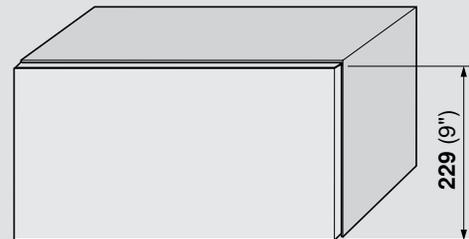

Total weight converted to decimal is 5.9 lb

Power factor = cabinet height multiplied by door weight including twice the handle weight

Power factor = 9 x 5.9

Power factor = 53.1

A power factor of 53.1 requires lift mechanism 20K2C00.N1

door weight + twice handle weight = 5 lb 14 oz

Step 1 – Check clearances

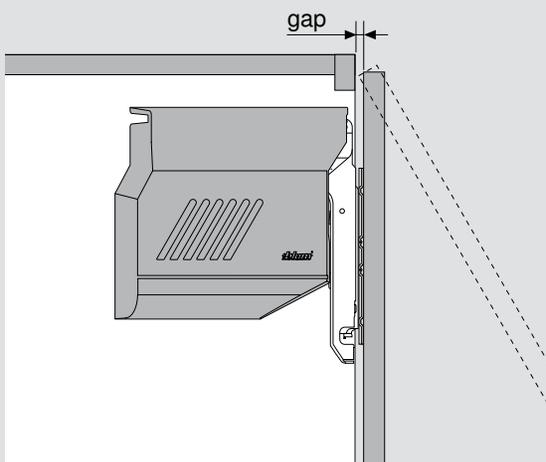

Space requirements

Door and hardware clearance

Lift mechanism clearance

Minimum reveals

$Z = \text{door height} \times .29 \text{ minus } 23 + \text{door thickness}$

Minimum gap

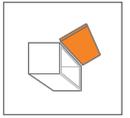

Decorative molding clearance

NOTE: Minimum gap assumes door radius of 1 mm

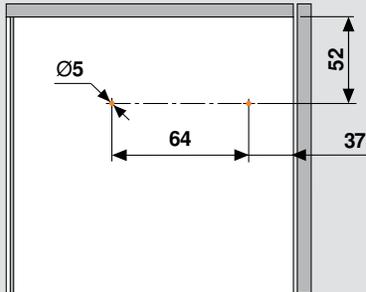

| | | | | |
|----------------|----|----|----|----|
| door thickness | 16 | 19 | 22 | 26 |
| maximum X | 70 | 59 | 49 | 35 |

Cabinet preparation for narrow aluminum doors

Step 2 – Mount the lift mechanisms

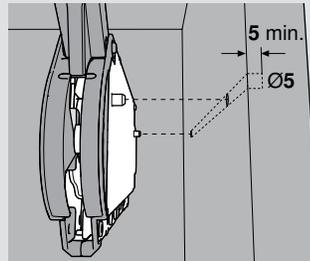

Boring for the locating pins

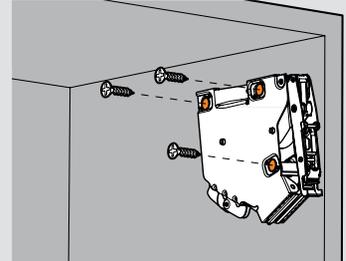

NOTE: Locating pin holes shown in orange

Lift mechanism positioning

Two locating pins fit into $\text{Ø}5 \times 5$ holes bored in the side of cabinet for proper positioning.

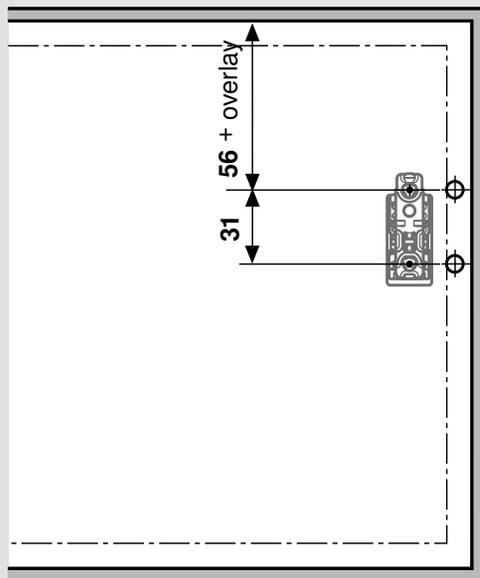

The included #7 x 35 mm (1-3/8") wood screws are required in the three holes marked in orange.

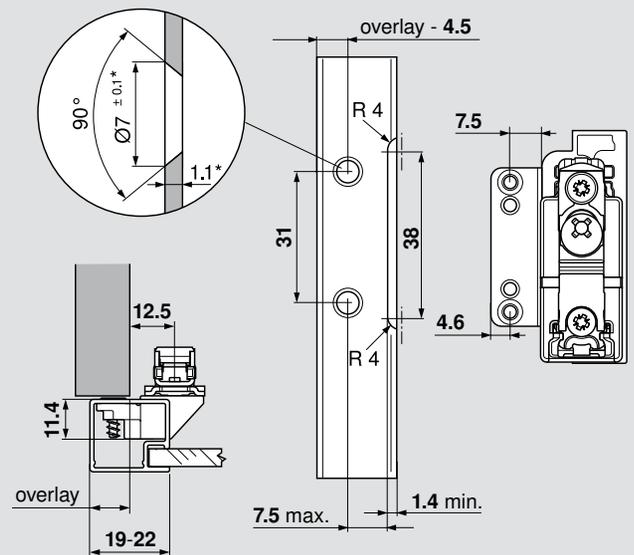

Step 3 – Determine the Lever arm mounting plate position and attach to the door

Arm assembly mounting plate location

NOTE: Attach mounting plate with two 699.110 aluminum screws

Arm assembly mounting plate

NOTE: When changing material thickness, adjust assembly dimensions accordingly

Step 4 – Assemble the cabinet

Follow the assembly instructions on page 98

easy **installation,**
and **adjustment**

AVENTOS can be assembled with ease and the proven CLIP technology makes the process almost entirely tool-free.

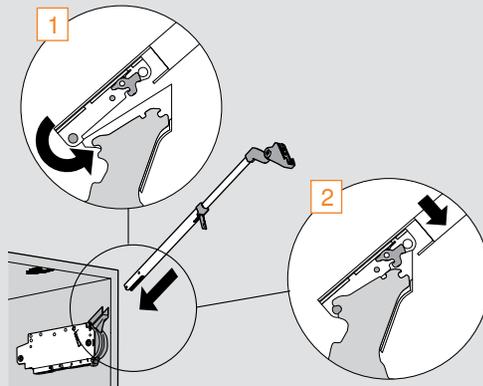

The only tool required is a hand held drill for adjusting the lift mechanism in precise accordance with the front weight. The fact that the cross stabilizer rods for AVENTOS HS and HL are attached without tools significantly reduces the amount of effort required for assembly.

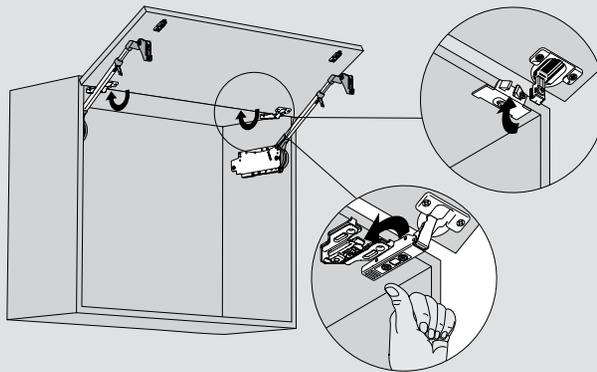

Fronts can be conveniently adjusted three-dimensions to ensure proper door alignment.

AVENTOS HF – Assembly

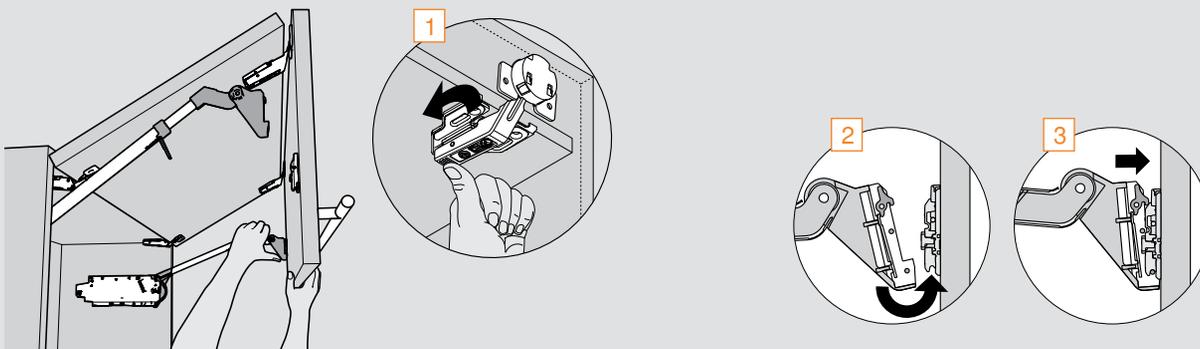

Attaching the telescopic arms

Attaching the top door to the cabinet

Attaching the bottom door to the cabinet

Warning: Risk of injury by spring-loaded telescopic arm!

- Do not push telescopic arm down
- Remove telescopic arm from mechanism before installing cabinet

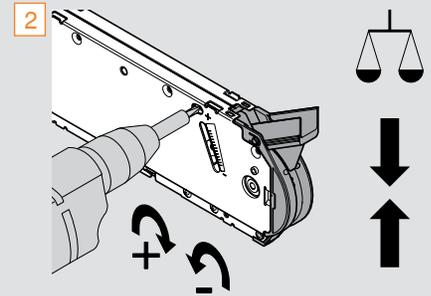

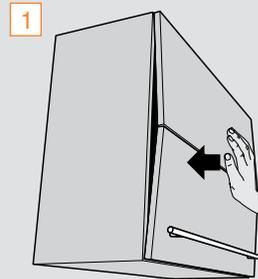

AVENTOS HF – Adjustments

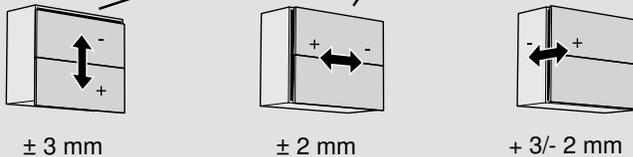

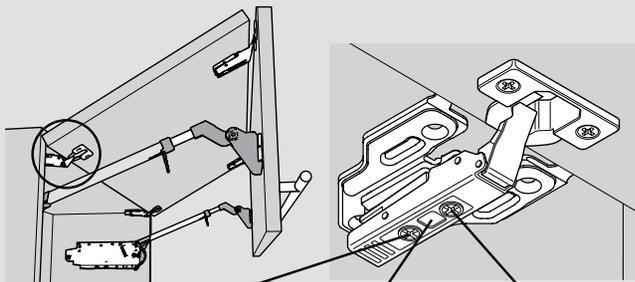

Lift mechanism tension adjustment

- 1 Close and flush doors to cabinet. Open and close door to test closing force.
- 2 Use a screw gun and a #2x2 POZI driver bit to adjust the lift mechanism to the desired tension. Test door again and repeat until desired function is achieved. Tension adjustment should be the same on both lift mechanisms.

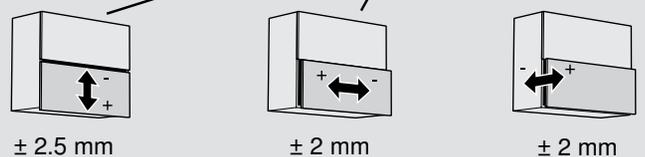

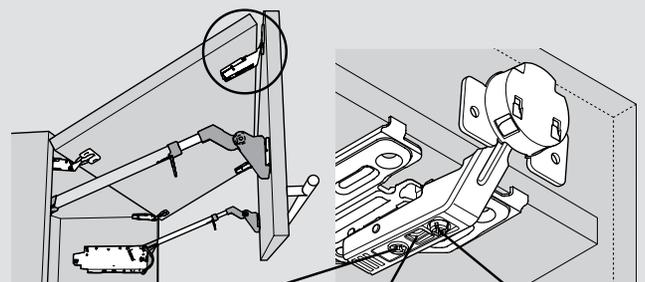

AVENTOS HF door adjustments

- 1 Adjust each top door hinge and mounting plate to properly align the top door to the cabinet.

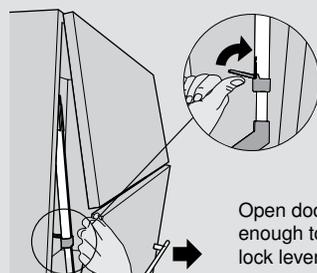

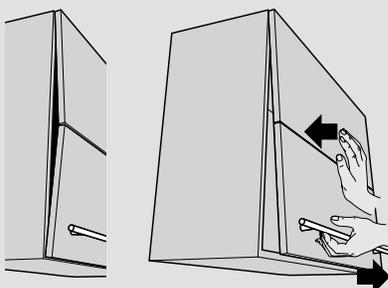

- 2 Adjust each bottom door hinge and mounting plate to properly align doors to the cabinet and to the top door.

NOTE: Although not illustrated here, telescopic arm mounting plates can also be adjusted horizontally ± 2 mm if needed

Adjust and lock telescopic arms

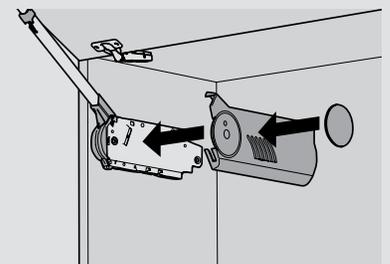

- 1 Close and flush doors to cabinet. While pressing on the top door, pull the bottom door open approximately one inch.
- 2 Slightly open door and lock the telescopic arms into position using the levers as shown.

Open door enough to lock levers

Attaching cover caps

Place the left and right cover plates over the appropriate lift mechanisms and snap them in place.

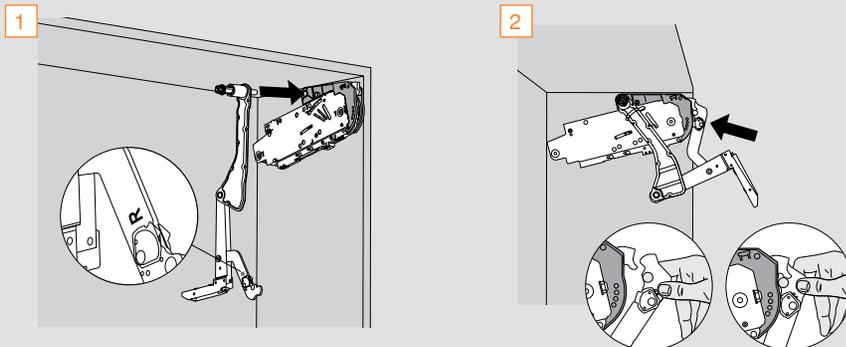

AVENTOS HS – Assembly

Attaching the arm assembly

Find the right and left arm assemblies and match them to the correct side of the cabinet.

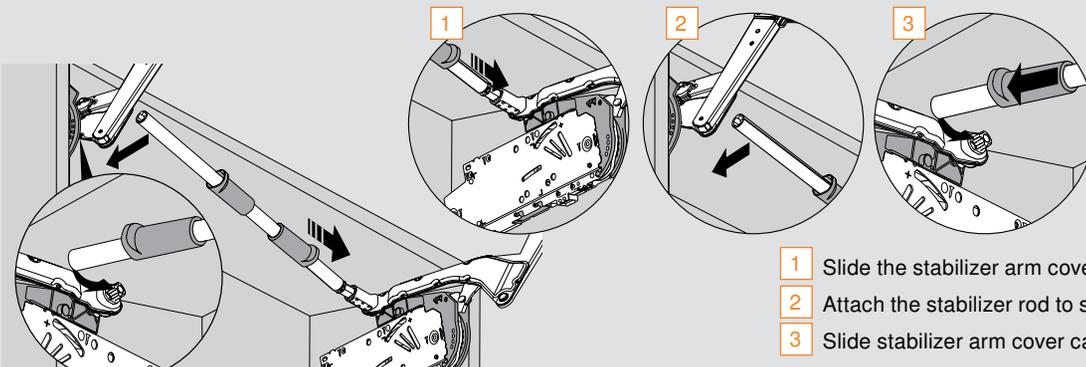

- 1 Attach the arm assembly to the lift mechanism as shown
- 2 Lift up on the arm assembly to lock into place

Attaching the stabilizer rod

Cut the stabilizer rod to fit the cabinet. Length = interior cabinet opening minus 129 (5-1/16")

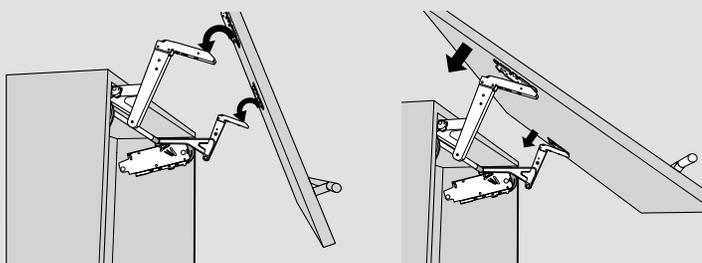

After cutting the rod to size follow steps 1, 2, and 3 below.

- 1 Slide the stabilizer arm cover caps onto the rod
- 2 Attach the stabilizer rod to spring loaded arm assembly
- 3 Slide stabilizer arm cover caps over rod on each end

Attaching the doors

Attach the door using the CLIP mechanism to the arm assembly

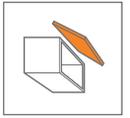

Warning: Risk of injury by arm assembly!

- Do not push arm assembly down
- Remove arm assembly from mechanism before installing cabinet

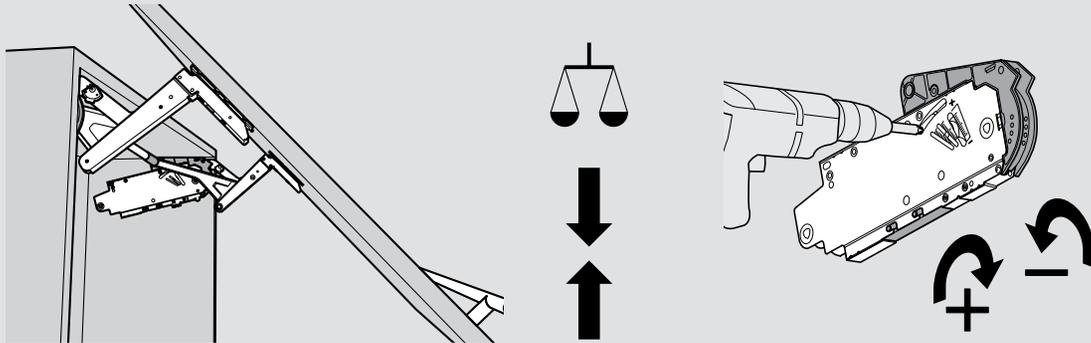

AVENTOS HS – Adjustment

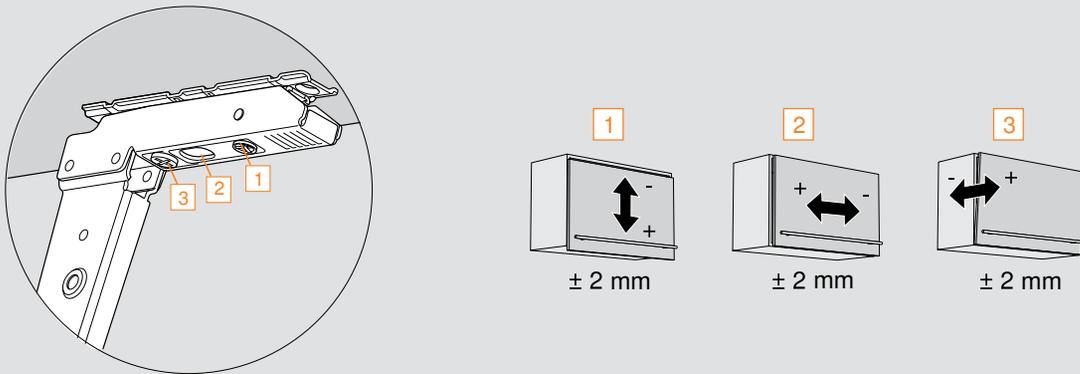

Adjusting the lift mechanism

Use a screw gun and a #2 x 2 POZI driver bit to adjust the lift mechanism to the desired tension (door weight balanced).

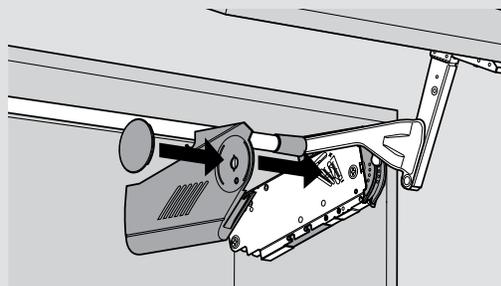

AVENTOS HS door adjustments

Use a POZI screwdriver to adjust cam adjustments for each of the three-dimensional door adjustments.

Attaching cover caps

Place the left and right cover plates over the appropriate lift mechanisms and snap them in place.

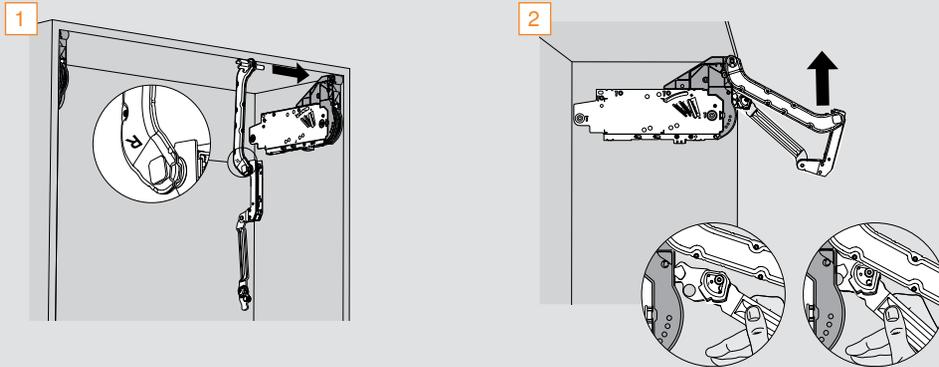

AVENTOS HL – Assembly

Attaching the arm assembly

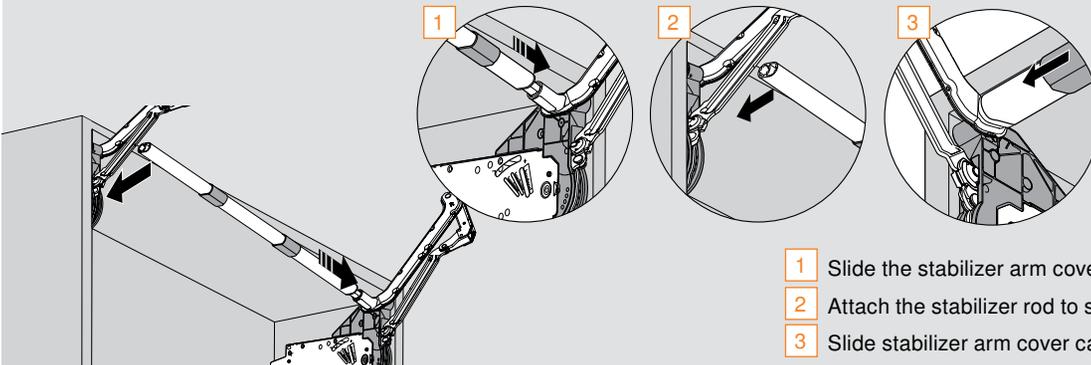

Find the right and left arm assemblies and match them to the correct side of the cabinet.

- 1 Attach the arm assembly to the lift mechanism as shown
- 2 Lift up on the arm assembly to lock into place

Attaching the stabilizer rod

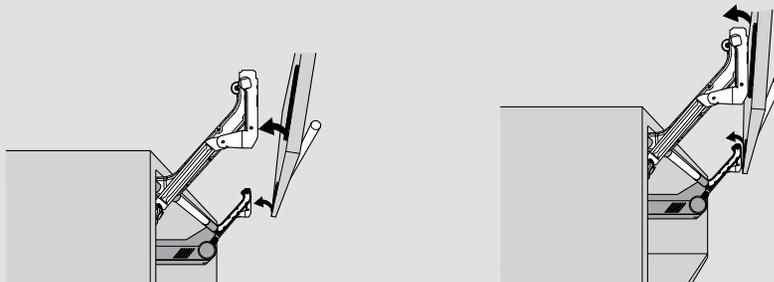

Cut the stabilizer rod to fit the cabinet. Length = interior cabinet opening minus 129 (5-1/16"). After cutting the rod to size follow steps 1, 2, and 3 below.

- 1 Slide the stabilizer arm cover caps onto the rod
- 2 Attach the stabilizer rod to spring loaded arm assembly
- 3 Slide stabilizer arm cover caps over rod on each end

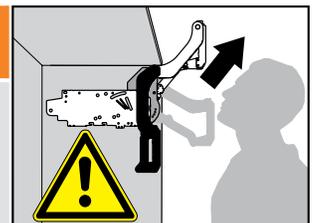

Attaching AVENTOS HL doors

Attach the door using the CLIP mechanism to the arm assembly.

Warning: Risk of injury by spring-loaded arm assembly!

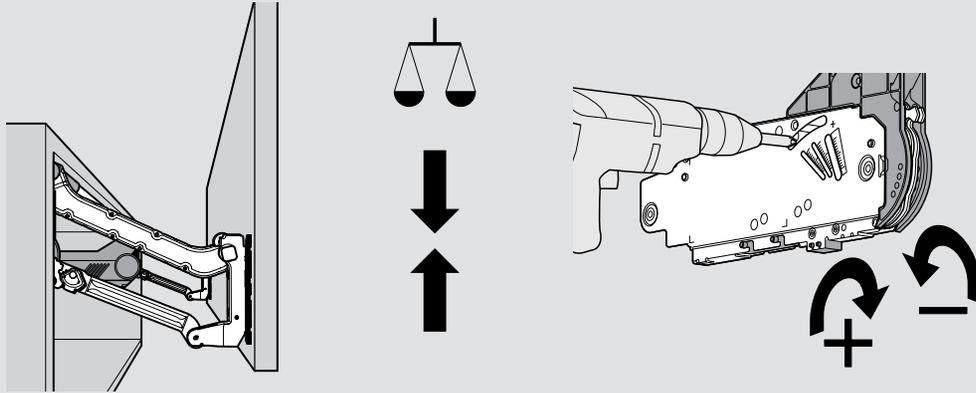

- Do not push arm assembly down
- Remove arm assembly from mechanism before installing cabinet

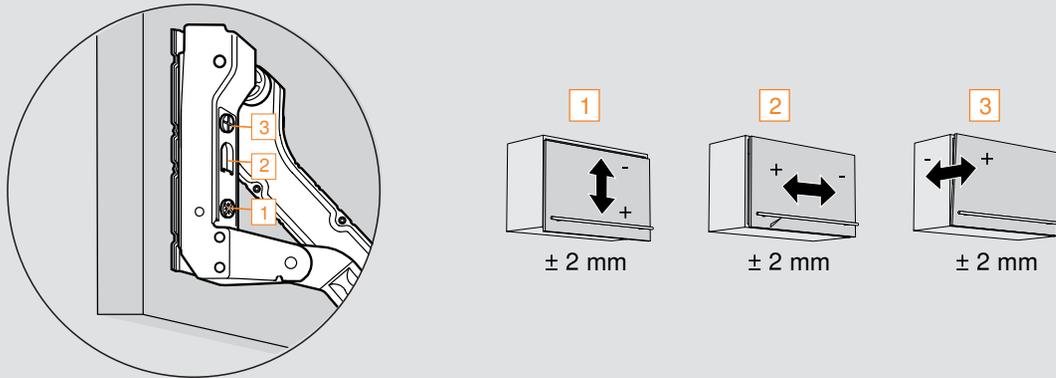

Adjusting the lift mechanism

Use a screw gun and a #2 x 2 POZI driver bit to adjust the lift mechanism to the desired tension (door weight balanced).

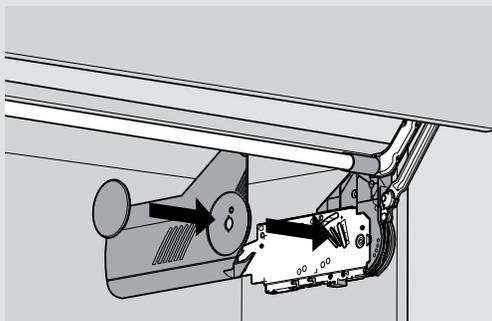

AVENTOS HL door adjustments

Use a POZI screwdriver to adjust cam adjustments for each of the three-dimensional door adjustments.

Attaching cover caps

Place the left and right cover plates over the appropriate lift mechanisms and snap them in place.

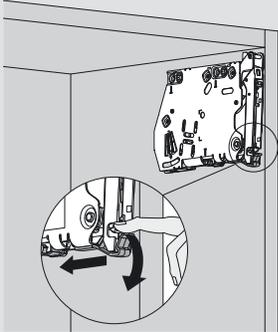

AVENTOS HK and HK-S – Assembly

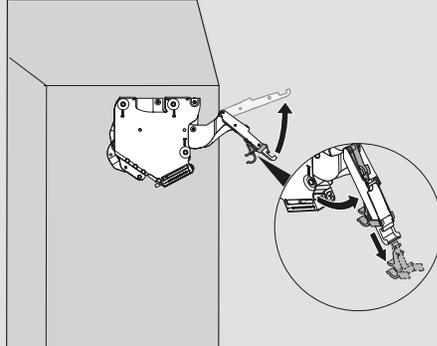

Remove transport tab

1 Carefully remove the transport tab

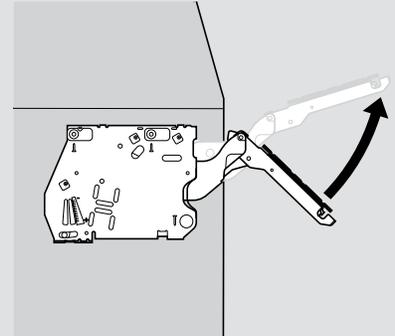

AVENTOS HK

AVENTOS HK-S

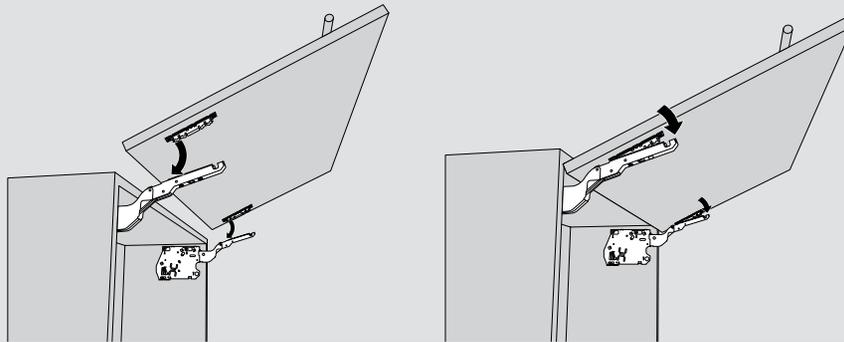

2 Raise the arm to the upright position

NOTE: Do not remove transport tab until just before attaching the door

Attaching AVENTOS HK/HK-S doors

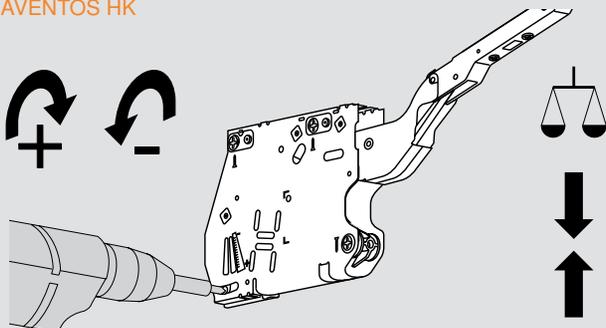

Attach the door using the CLIP mechanism to the arm assembly.

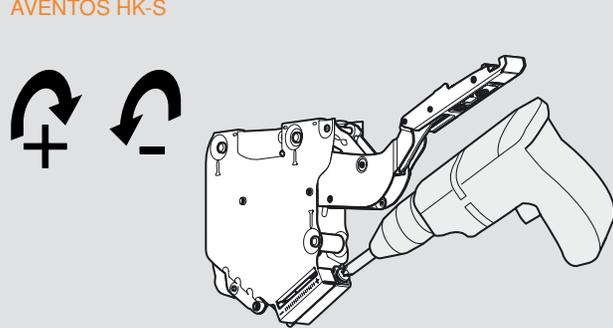

Adjust the lift mechanism

Use a screw gun and a #2 x 2 POZI driver bit to adjust the lift mechanism to the desired tension (door weight balanced).

AVENTOS HK

AVENTOS HK-S

Warning: Risk of injury by spring-loaded lever arm!

- Do not push lever arm down
- Secure lever arm before installing cabinet

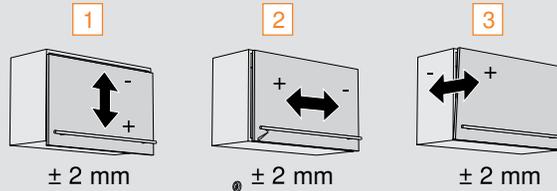

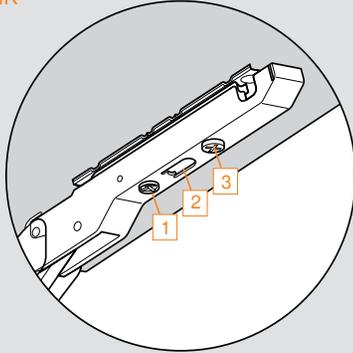

AVENTOS HK and HK-S – Adjustments

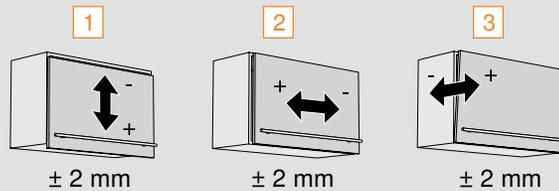

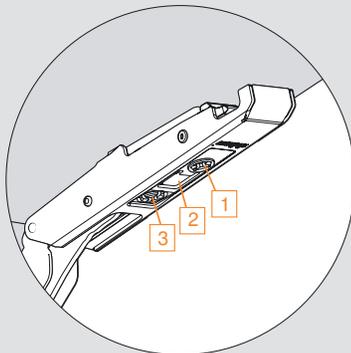

AVENTOS HK/HK-S door adjustments

Use a POZI screwdriver to adjust cam adjustments for each of the three-dimensional door adjustments.

AVENTOS HK

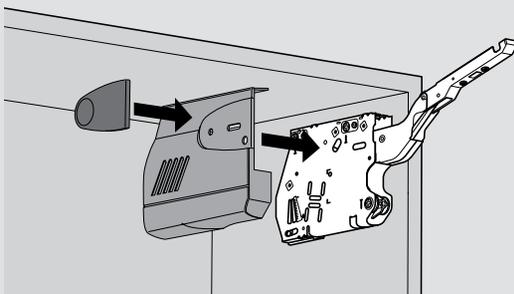

AVENTOS HK-S

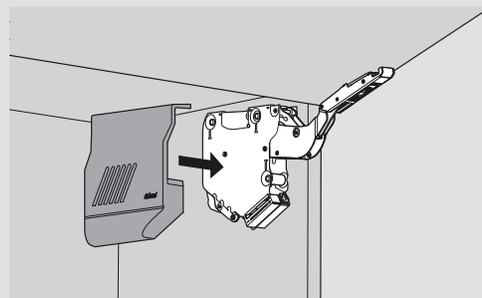

Attaching cover caps

Place the left and right cover plates over the appropriate lift mechanisms and snap them in place.

AVENTOS HK

AVENTOS HK-S

AVENTOS inset application – Face frame

Face frame inset application

When it comes to inset cabinets and AVENTOS there are many ways to accomplish this application. Below is an option that can be used for both face frame and panel cabinets alike.

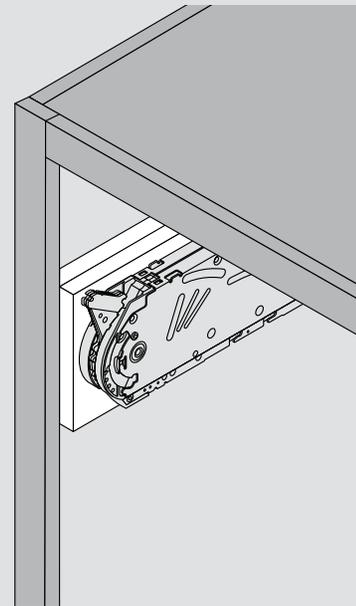

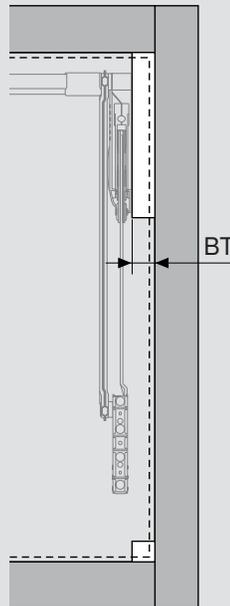

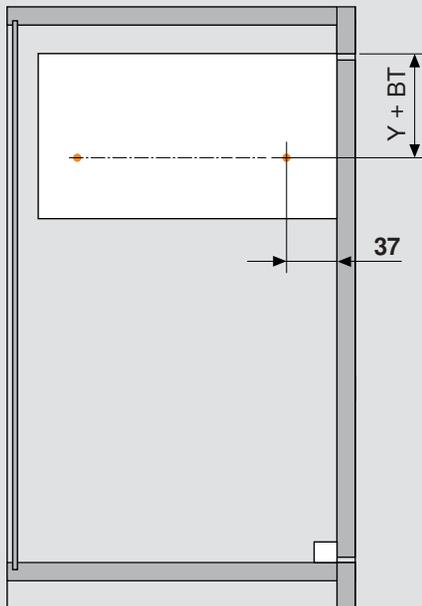

Face frame cabinets

The illustrations below show the idea of blocking-out the interior of a face frame cabinet to obtain the needed space required for AVENTOS. By blocking-out the interior of the cabinet to protrude into the cabinet opening, we have moved the AVENTOS lift mechanism far enough into the opening for the arm assembly to clear the frame of the cabinet.

Planning information for blocking-out

In this illustration the **37** setback for the $\text{Ø}5$ x 5 locating pin holes is measured from the back of the door (or back edge of face frame). The Y dimension is the locating pin position of the selected lift mechanism.

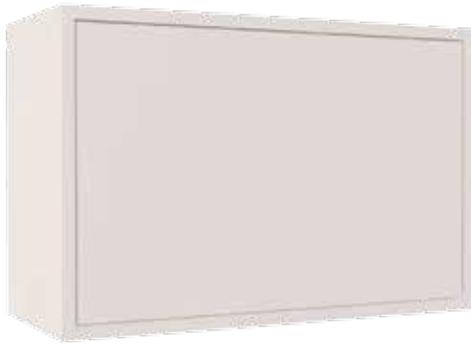

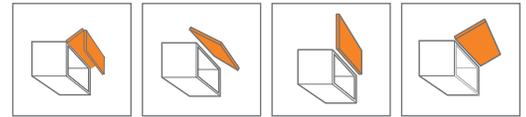

This illustration shows how the block-out provides the needed clearance for the lift mechanism and also provides a stopping point for the door.

NOTE: Mounting plate position varies based on block-out thickness used at top of cabinet

BT = block-out thickness

AVENTOS inset application – Panel

Panel inset application

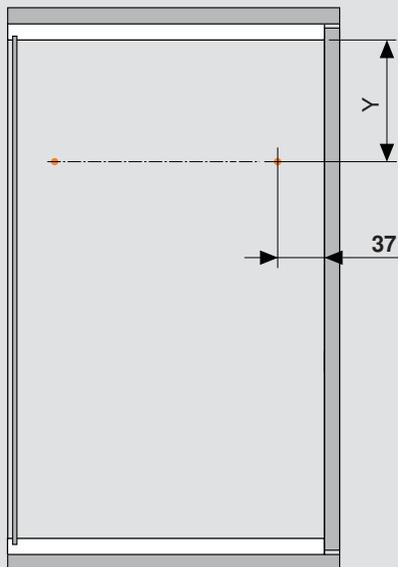

When it comes to inset cabinets and AVENTOS there are many ways to accomplish this application. Below is an option that can be used for both face frame and panel cabinets alike.

Panel cabinets

The illustrations below show the idea of building a cabinet within a cabinet to obtain the needed space required for AVENTOS. By either building a smaller cabinet within or adding panels to the outside of a cabinet, you have made it possible to simulate the look of an inset cabinet.

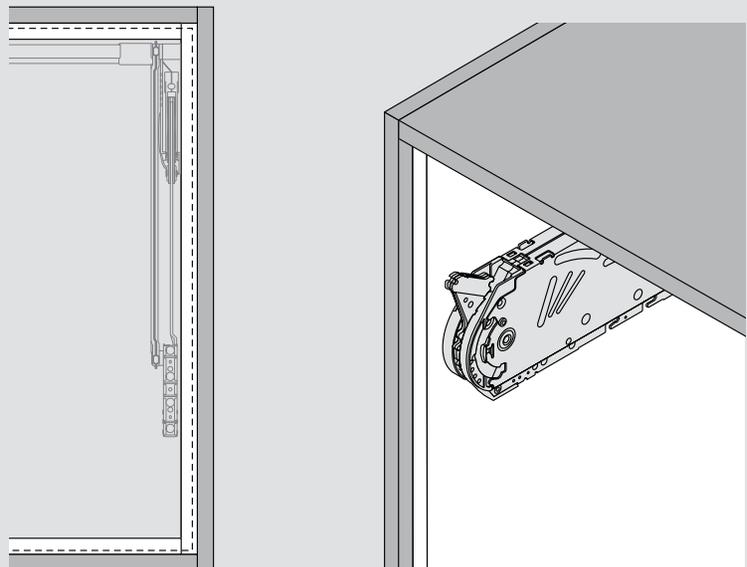

Planning information for cabinet-within-cabinet

In this illustration the 37 setback for the Ø5 x 5 locating pin holes is measured from the back of the door (or front edge of the interior cabinet). The Y dimension is determined by the selected AVENTOS lift system.

NOTE: Mounting plate position varies based on block-out thickness used at top of cabinet

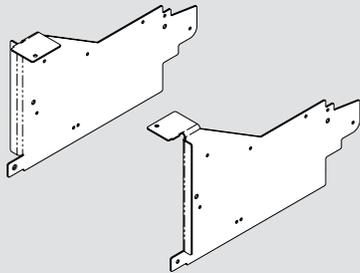

This illustration shows how the interior cabinet is simply an overlay cabinet that is set back the thickness of the door front and bumper. This also provides a stopping point for the door.

NOTE: The top and bottom panels of the inner cabinet are optional but their intended thickness are needed for calculating the Y dimension for the lift mechanism.

AVENTOS HL – Face frame corner cabinet

HL bracket set

- Brackets for mounting AVENTOS HL in a face frame corner appliance garage application
- Minimum frame offset **12.5** (1/2")
- Provides accurate positioning of AVENTOS HL lift system in cabinet

Set includes:

- Right and left brackets
- M4 x 30 mm lift mechanism machine screws (qty 12)

Part no.

Bracket set

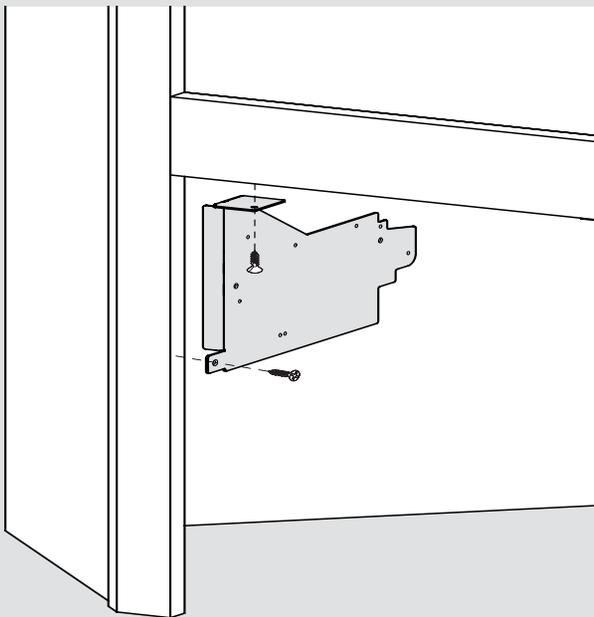

20L7001

Installation screw

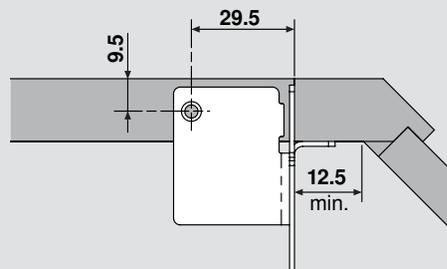

7074N

Bracket installation

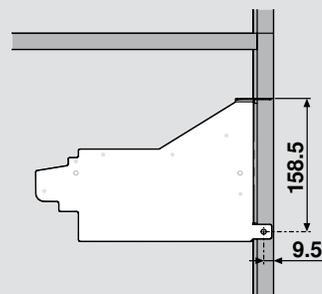

Attach each bracket to the top and side of the face frame opening with two #7 x 3/4" (7074N) wood screws.

Top mounting screw position

Side mounting screw position

Appliance garage bracket

Arm assembly mounting plate location

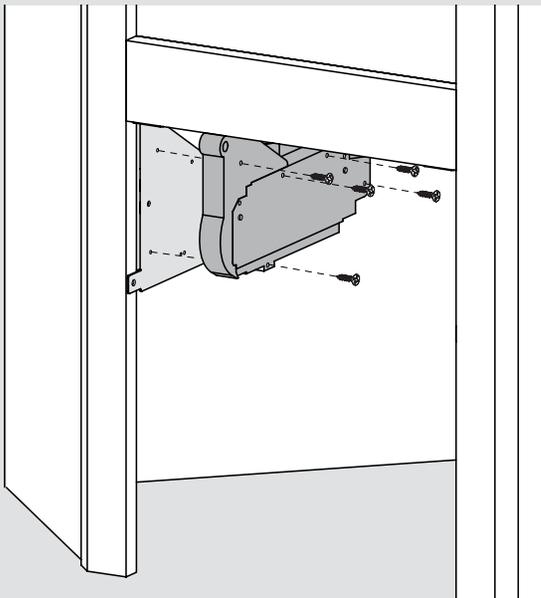

Attach mounting plate with four screws provided

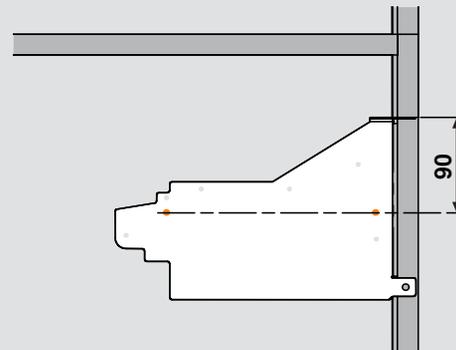

| | | |
|-------------------|------------|--|
| arm assembly | X | NOTE: Position is 2 mm lower than a standard 20L3900.06 application |
| 20L3900.06 | 305 | |

Lift mechanism attachment

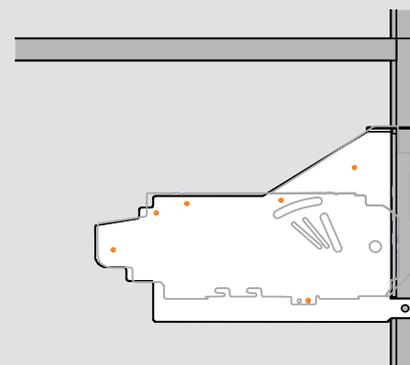

Attach each lift mechanism to the brackets with six M4 x 30 mm machine screws (included)

Locating pin locations

Machine screw locations

NOTE: Locations marked in orange

Accessories

Angle restriction clips

AVENTOS HF angle restriction clips

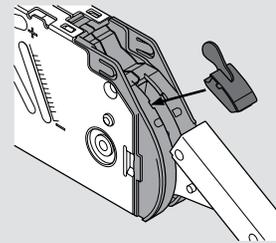

- Restricts opening angle of the door
- Prevents the door from hitting an object above or keeps the handle within reach on very high cabinets
- One required per lift mechanism

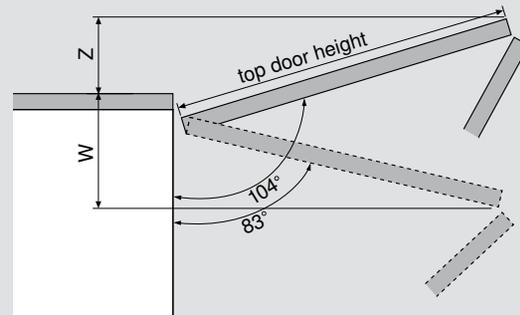

Part no.

| | |
|-----------------------|----------------|
| 104° restriction clip | 20F7051 |
| 83° restriction clip | 20F7011 |

Attachment

Clearance above the cabinet

| | |
|-----------------|--|
| Using 104° clip | $Z = \text{top door height} \times .24 + 19$ |
| Using 83° clip | $W = \text{top door height} \times .12 - 25$ |

AVENTOS HK angle restriction clips

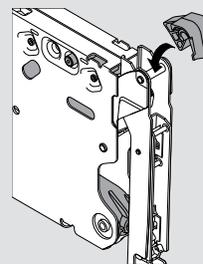

- Restricts opening angle of the door
- Prevents the door from hitting an object above or keeps the handle within reach on very high cabinets
- One required per lift mechanism

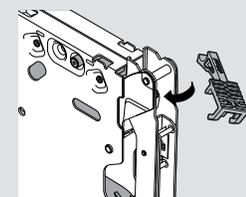

Part no.

| | |
|-----------------------|----------------|
| 100° restriction clip | 20K7041 |
| 75° restriction clip | 20K7011 |

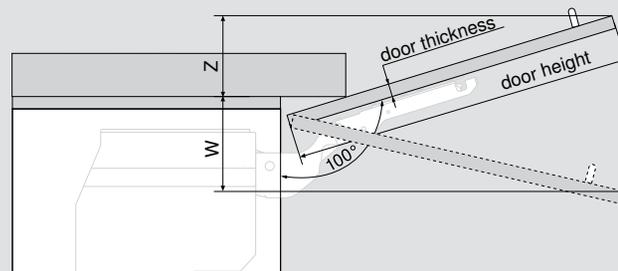

HK attachment

HK-S attachment

Clearance above the cabinet

| | |
|-----------------|---|
| Using 100° clip | $Z = \text{door height} \times .17 \text{ minus } 15 + \text{door thickness}$ |
| Using 75° clip | $W = \text{door height} \times .26 + 15$ |

AVENTOS HK-S angle restriction clips

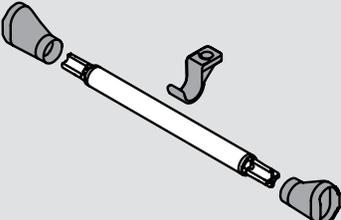

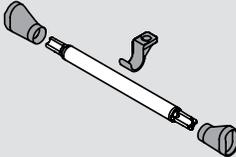

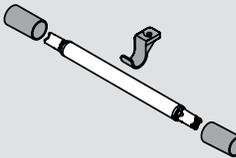

- Restricts opening angle of the door
- Prevents the door from hitting an object above or keeps the handle within reach on very high cabinets
- One required per lift mechanism

Part no.

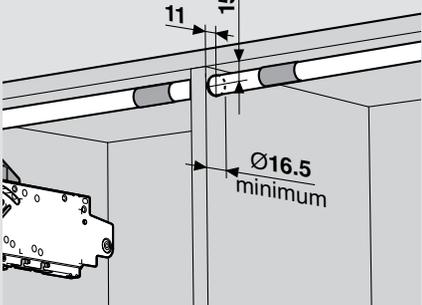

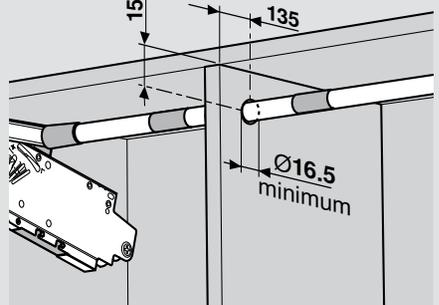

| | |
|-----------------------|----------------|
| 100° restriction clip | 20K7A41 |
| 75° restriction clip | 20K7A11 |

Stabilizer rod connector sets

Assembly aids

Templates

Universal individual template

- Used to pre-bore for AVENTOS lift mechanism locating pins
- Also used for pre-boring for cabinet profiles and BLUMOTION for doors and TIP-ON for doors adapter plates
- Calibrated scale for accurate setting

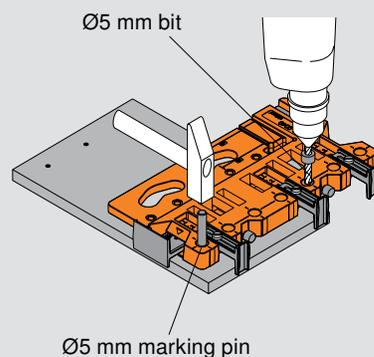

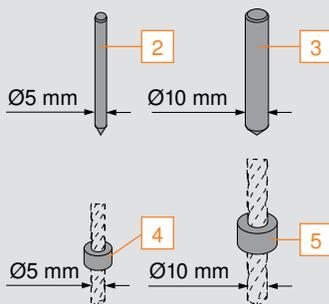

Set includes:

- 1 Universal individual template
- 2 Ø2.5 mm stop collar
- 3 Ø5 mm stop collar

Part no.

| | |
|-------------------|------------|
| Template | 65.1051.01 |
| Ø2.5 mm drill bit | DB-2.5mm R |
| Ø5 mm drill bit | DB-5mm R |

Universal boring template

- Used to pre-bore AVENTOS telescopic arm and arm assembly mounting plates
- Can also be use to pre-bore for drawer fronts, bottoms and backs for METABOX and TANDEMBOX drawer systems

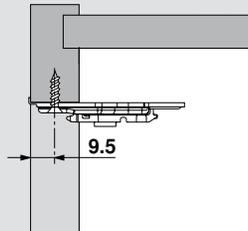

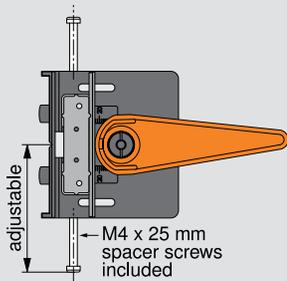

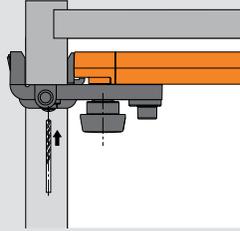

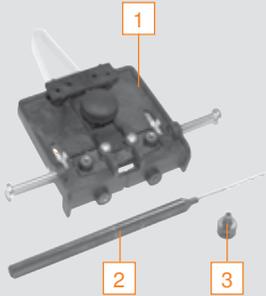

Set includes:

- 1 Template
- 2 Ø5 mm marking pin
- 3 Ø10 mm marking pin
- 4 Ø5 mm stop collar
- 5 Ø10 mm stop collar

Part no.

| | |
|--------------------|-------------|
| Universal template | ZML.0040.01 |
| Ø5 mm drill bit | DB-5mm R |

Platemate

- Boring template for all Blum face frame adapter plates
- Clamps to the frame with cam lever
- Adjustment knob accommodates face frame thickness of 5/8" to 1"
- Spacer screws allow quick use without measuring

Set includes:

- 1 Platemate template
- 2 Ø2.5 mm pilot bit and extension
- 3 Ø5 mm stop collar

Also includes:

- Reversible bushing insert for 32 mm hole spacing for 175L6xxx
- Reversible bushing insert for 40 mm hole spacing for 175H6xxx

Part no.

| | |
|-------------------|-------------------|
| Platemate | 65.5030.01 |
| Ø2.5 mm drill bit | DB-2.5mm R |

POZI DRIVER and bits

A POZI screwdriver (different from Phillips) is the most crucial tool you can use to assure that full torque is applied to all Blum mounting screws. POZI screws can be identified by the distinctive "tick" marks located in the center of the screw head recess.

Part no.

| | |
|--------------------------|----------------------|
| #2 POZI DRIVER | POZI DRIVER |
| 1/4" Magnetic bit holder | BIT HOLDER |
| #2 x 1" POZI bit insert | POZI BIT #2x1 |
| #2 x 2" POZI bit insert | POZI BIT #2x2 |

Vix piloting bit

For use in handheld drills

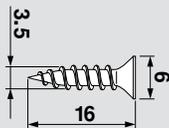

Part no.

| | |
|----------------------|--------------|
| Ø2.8 mm piloting bit | VPB-5 |
|----------------------|--------------|

Deep thread wood screw

Use to attach mounting plates to doors

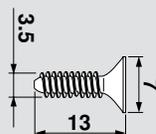

Part no.

| | |
|----------------------|-------------|
| #6 x 16 mm, Phillips | 606N |
| #6 x 16 mm, Pozi | 606P |

Fine thread aluminum screw

Use to attach mounting plates to wide frame aluminum doors

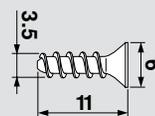

Part no.

| | |
|-----------------------|--------------|
| #7 x13 mm fine thread | 7072A |
|-----------------------|--------------|

Deep thread aluminum screw

Use to attach mounting plates to narrow frame aluminum doors

Part no.

| | |
|----------------------|----------------|
| #6x11 mm deep thread | 699.110 |
|----------------------|----------------|

Blum, Inc. Headquarters, Stanley NC

Why choose Blum

Blum, Inc. is a leading manufacturer of functional hardware for the kitchen cabinet and commercial casework industries specializing in lift systems, concealed hinges and drawer runner systems. Virtually all of the hardware needed to assemble and make cabinets functional is available within the wide range of quality Blum products. Blum supports the U.S. market with a network of more than 150 dependable distributors, 40+ knowledgeable Blum sales representatives and an experienced customer service department.

Commitment to manufacturing in the U.S.

Blum manufactures many of its products in our 450,000 sq ft manufacturing, logistics and warehouse facility located in Stanley, North Carolina. Manufacturing closer to the customer allows Blum to react quickly to changing customer needs including unexpected surges in demand. Customer pickups and deliveries can be timed to better match their production schedules. Blum is committed to manufacturing in the U.S. for the U.S. market.

Product development at Blum considers all of the various customers who will come in contact with our products. With this "Global Customer Benefits" philosophy we strive to create advantages for all users.

Blum, Inc. is ISO 9001 certified which means that you are assured of consistent quality in every Blum product. What's more they exceed the requirements of ANSI/ BHMA standards for cycle life, static load and self-closing performance.
